SURVEY DESCRIPTION

The research was carried out by Baltic Institute of Social Sciences.

The current stage of the survey “Language” was implemented from August 6, 2007 till September 10, 2007.

2000 respondents have taken part in the survey in all Latvia. The method used – face-to-face interviews at the respondents’ residence. The sample was made following multi stage stratified random sampling method to ensure representative sample of residents of Latvia aged 15 – 74. The obtained results have been additionally weighted by gender, age, nationality, type of residence and region accordingly to the recent data of the Central Statistical Bureau of Latvia.

From all respondents 1370 have Latvian as native language, 569 have Russian and 61 have other language as native one. Total size of the sample is 2000 respondents.

The survey results were compared with those of similar surveys conducted since June 1996, and where the sample of each wave was approximately 2000 respondents.

The report consists of the analytic part, graphs and table report.

MAIN CONCLUSIONS

The 2007 survey was conducted after a three-year interruption,¹ and so it is no accident that this survey has revealed greater changes than was the case when surveys were conducted on an annual basis. It must be stressed, however, that there have also been changes in tendencies over the course of the past three years. During the first years of the millennium attitudes vis-à-vis the state language had a tendency to worsen, but this survey has shown that the opposite is now true.

The first thing that has to be said about the results of the survey is that there have been a series of positive changes which indicate that the status of the Latvian language is firming up among minority populations. The number of Latvian speakers has increased, the environment in which Latvian is spoken has expanded, and attitudes vis-à-vis the speaking of Latvian have improved.

Whether the results of this survey really indicate that there has been a shift in attitudes among Russian speakers vis-à-vis the learning and speaking of the language and the prestige of the language – that will be seen in the next survey, which is planned for the spring of 2008. The fact is that there is a margin of error in any survey, and there are always specific circumstances which can tweak the results.

The survey shows that Latvian language skills among non-Latvians have gradually been improving. 57% of non-Latvians report good Latvian language skills (47% in 2004). The percentage of people who can hardly speak the language or don't speak it at all has declined from 10% in 2004 to 7% this year. The most notable changes have occurred among young people. In the late 1990s, some 40% of non-Latvian young people felt that they had good Latvian language skills, but the same was true of 74% of respondents aged 15 to 34 in this survey. Changes in other age groups are lesser, but there, too, there have been improved state language skills.

On the other hand, the number of Russian speakers among ethnic Latvians is diminishing gradually, and that has been particularly true over the last several years. In 2003, 83% of Latvian respondents rated their Russian language skills as good, but this year that percentage had dropped all the way to 67%. Weaker Russian language skills are found among younger Latvians. In the 15-34 cohort, 54% speak the

¹ Surveys under the auspices of the language project had been conducted on an annual basis from 1996, but after 2004, there was a three-year interruption.

language well, 39% have fairly poor language skills, and 7% do not speak Russian at all.

It is important here that the linguistic situation between Russian speakers and Latvians becomes less asymmetrical. 67% of Latvians have good Russian language skills, and 57% of non-Latvians say the same about their Latvian language skills.

Among young people asymmetry of language skills has changed to oposit: 74% of non-Latvian young people have good Latvian language skills, and 54% of Latvians say the same about their Latvian language skills.

Readily evident are the consequences of education policy in Latvia. Latvian language skills among Russian speaking young people are on the rise, but the percentage of ethnic Latvians who have a command of the Russian language is dropping. This fact should be the focus of greater attention and debate. There is the question of whether a decline in the number of Russian speakers in Latvia is a loss or a benefit.

The survey shows that the status of the Latvian language has become more stable, and Latvian is spoken in a broader context than was the case before. The percentage of people who only speak Russian in the public space has declined. Only 29% of Russian speakers report only speaking Russian at work, and 32% speak only Russian on the street and when shopping. The remaining respondents (around 60%) say that they speak both Latvian and Russian. The proportions 10 years ago were quite the opposite when it came to people's workplaces – back then, 60% of Russian speakers said that they only spoke Russian at work.

Similar facts became evident when respondents were asked about the Latvian language broadcast media. In all surveys from the mid-1990s, the presence of the Latvian language in the mass media was found to be declining, but here, again, the 2007 survey shows a turning point. The audience of Russian speakers who watch Latvian television programmes and listen to Latvian radio broadcasts is expanding. There may be several different reasons for this. Given that the overall Latvian language skills of Russian speakers have improved, we can assume that the ability of such people to "hear" the Latvian language has improved, too. The data do not, however, allow one to draw the conclusion that media consumption in other languages, including the Russian language, has diminished.

Another indicator of the fact that the status of the Latvian language is becoming stronger is that nearly 100% of Latvians and some 90% of Russians agree with the idea that all residents of the country should have a free command of the language.

At the same time, however, it is also evident that the importance of the Russian language has increased in the views of all ethnic groups in Latvia over the last several years. The study shows an increase in the percentage of Latvians who feel that it is important for all residents of the country to have a good command of the Russian language (56% in 2002, 70% in 2007). There are also greater percentages of Russian speakers who admit that it is necessary to speak the Latvian language (87% in 2002, 91% in 2007). These are not necessarily unambiguous data. On the one hand, they indicate that there is a competition between languages, because respondents feel that it is necessary to have a command of both. On the other hand, the data suggest the hypothesis that there is greater tolerance vis-à-vis languages. People in both ethno-linguistic groups are increasingly agreeing that the other language is important, too.

Other data from the survey also speak to greater tolerance in the area of language use. The number of non-Latvians who are happy to speak Latvian has increased over the last three years at the expense of those who say that speaking the language is unpleasant for them.

The data about positive changes in the views of Russian speakers vis-à-vis the Latvian language propose the question of why this has happened. One might cautiously say that only the next survey will really show whether the changes that have been recorded this time will turn into stable trends. On the other hand, if we look at the results of all of the surveys since 1996, then we see something of a wave effect in these attitudes. Views improved throughout the 1990s, only to deteriorate somewhat after the turn of the century. That continued for several years, and the 2007 survey can be seen, to a certain extent, as the start of a new wave. It is quite possibly the case that problems with education reforms, political disputes among policy-makers, extensive protests against the education reforms – all of this came together to foment more negative attitudes vis-à-vis the Latvian language in the early years of the millennium. Perhaps changes in the political agenda have calmed those people who have had negative views about the Latvian language, and maybe Russian speakers are now looking at other, different strategies in dealing with any linguistic problems that

may prevail. The study shows for instance, that Russian speaking parents are increasingly sending their children to schools where classes are taught in Latvian. These respondents feel that this will allow their kids to have a better command of their native Russian language and of the Latvian language. True, this is more often the case among those Russian speaking parents who themselves have a good command of the Latvian language.

In conclusion, it might be added that generally speaking, women have better language skills and more positive attitudes toward the Latvian language than men do. Women are more likely than men to attend Latvian language courses, and they are more ready to speak Latvian as a means of communication.

RESULTS OF THE RESEARCH

The native language

The results of the 2007 survey show that 96% of Latvians consider Latvian to be their native language, while 97% of Russians consider Russian to be theirs. The situation is different among respondents from other nationalities – 10% consider Latvian to be their native language, 41% cite Russian, and 49% consider some other language to be their native tongue (Figure 1.1). If we consider the way in which the native language identity has changed among ethnic minorities since the start of the new millennium, then we see that such people are gradually becoming less likely to consider Russian to be their native language, at the same time the proportion of those who consider another minority language to be their native tongue is on the rise (Figure 1.2).

Language use

Latvians and Russian speakers typically report speaking their native language at home, but both languages in the public space. Among Latvians, some 90% mostly speak Latvian at home, while some 70% of Russian speakers mostly speak Russian

there (Figure 2.1 and 2.2). In the public space, however, the second language supplements the native language.

If we look at how this situation has developed over the past 10 years, then we see that nothing has changed among Latvians, but Russian speakers increasingly say that they speak some Latvian at home in addition to Russian (nearly 30% in 2007, as opposed to around 20% in the 1990s).

Latvians speak Russian more often in the public space than at home. Approximately 30% say that they speak Russian with friends, on the street and when shopping. There have been no substantial changes in this regard over the last 10 years. The percentage of Latvians who speak Russian at work, however, has increased – nearly 40% in 2007, as opposed to just 30% or so at the turn of the millennium.

Similarly, Russian speakers speak Latvian far more often in the public space than at home – particularly at work (35%), when shopping and on the street (34%), and less often with friends (16%). The number of people who only speak Russian in the public space has declined. Only 29% of respondents say that they speak exclusively in Russian at work, while 32% say the same about when they are on the street or in a store. Around 60% of Russian speaking respondents, however, say that they speak Latvian alongside Russian. It is key here that 10 years ago the proportions were very different. Approximately 60% of Russian speakers only spoke Russian at work. Among non-Latvians, Latvian is spoken more often in the public space by rural residents (not counting the region of Latgale) than by urban residents. People with lower income are more likely than those with a higher income level to do the same.

Situations in which Latvian is spoken

Non-Latvians are most likely to speak Latvian when they are addressed in Latvian and when the other person doesn't understand Russian – around 70% of respondents say that they speak Latvian in such situations (Figure 3). More than one-half (55%) of non-Latvians speak Latvian when visiting government institutions, and 48% do so when they find themselves in a group where Latvians predominate. 36% even say that they speak Latvian if only one of those who are present is a Latvian. 27% of respondents say that they speak Latvian so as to practice the language. If we

compare these results to those in previous years, then we see that Russian speakers are far more likely to speak Latvian in any and all of these situations now than was the case before.

Attitudes toward speaking Latvian

Survey data over the course of the years have shown shifting tendencies in terms of what people think about speaking the Latvian language. Attitudes improved in the first few years of the new millennium, after which the percentage who agreed with the statement that “speaking Latvian creates positive emotions” began to drop. It must be stressed here that the 2007 survey shows that the percentage of those who have positive attitude towards speaking Latvian has increased (43% in 2007, as opposed to 27% in 2004). The percentage of those who do not like to speak Latvian at all has declined from 11% to just 6% in that period of time (Figure 4).

Negative attitudes vis-à-vis speaking the Latvian language are found more commonly among older and less educated people.

Language skills

Latvian language skills are gradually improving among non-Latvians. 57% report good Latvian language skills, as opposed to just 47% who said the same three years ago (Figure 5.1). The percentage of respondents who don't speak the language at all has declined from 10% to 7%.

Looking at change in language skills since the mid-1990s, we see that among different language-related skills, the ability to speak the Latvian language has increased the most. In the mid-1990s, only 40% of non-Latvians reported that they could speak the language freely, but now that percentage has risen to 66%.

The most significant changes in Latvian language skills can be seen among young people. The percentage of those aged 15 to 34 who have a good command of the language has increased substantially. In the late 1990s, 40% or so of people in the age group evaluated their own Latvian language skills as being good, but in 2007, the same was said by 74% of young people (Figure 5.2). The changes in other age groups have been less substantial, but improvements in state language skills can be seen

across the board. Among non-citizens, it must be emphasised, 14% of respondents don't speak the Latvian language at all, and 51% have poor skills. The fact that one-third of non-citizens have good Latvian language skills, however, indicates that the failure to learn the state language is not the only factor which keeps some people from pursuing Latvian citizenship.

The flip side to this coin is that the percentage of Russian speakers among ethnic Latvians has declined a bit, and that has particularly been true in recent years. In 2003, 83% of Latvians said that they had good Russian language skills, but that percentage has dropped to just 67% of Latvian respondents in 2007 (Figure 6). Poorer Russian language skills are found among younger people. In the 15-34 cohort, 54% speak the language well, 39% of young people speak it poorly, and 7% don't speak Russian at all.

It is important here that the linguistic situation between Russian speakers and Latvians becomes less asymmetrical. 67% of Latvians have good Russian language skills, and 57% of non-Latvians say the same about their Latvian language skills.

Among young people asymmetry of language skills has changed to oposit: 74% non-Latvian young people have good Latvian language skills, and 54% of Latvians say the same about their Latvian language skills.

Testing of Latvian language skills

Some 40% of surveyed non-Latvians have undergone language skills attestation. No respondent reported having failed the test (Figure 7.1). 13% passed at the highest level, 18% passed at the medium level, and 7% passed at the lowest level.

The highest-level attestation was obtained more often by women, by people with a higher level of education and income, and by people of pre-retirement age.

Learning the Latvian language

School remains the main place where people learn the Latvian language. Half of the respondents (50%) reported that that's where they learned it (Figure 9). At the

same time, however, 73% of young people said that this was the case, while only 48% of those in the 35-49 age group and just 34% among those aged 50 to 74 did the same. This indicates that the education system has ensured Latvian language learning to a far greater degree since the restoration of Latvia's independence in 1991 than was the case during the Soviet era.

When respondents were asked whether they have attended language courses, the positive answer came more often from people with a higher education (26%), as opposed to those with an incomplete higher education (16%). Women were more likely to have attended courses than men (20% and 11%). Men were more likely to say that they learn the language on an everyday basis by speaking with Latvians on the street or when shopping. Businesspeople were more likely than others to have learned the language at work.

Language courses

16% of all non-Latvians have attended various Latvian language courses (Figure 9). 36% attended such courses at language schools, while 24% did so at work, but not in the context of courses organised by the Latvian Language Learning State Agency (LVAVA) (Figure 10). 7% of respondents did attend LVAVA courses, which are known as *LAT2*. In 2004, the LVAVP courses were more popular – 18% of respondents at that time reported having attended them. More respondents now than before attended courses organised by the Naturalisation Board – 23% in 2007, as opposed to just 3% in 2003 and 7% in 2004. Russian speakers were also more likely now than in the past to hire private tutors to learn the language individually (13% in 2007, 4% in 2004). Various Internet-based education programmes have also become more popular.

The environment for the Latvian language

Even though the Latvian language faces stiff competition in the overall linguistic environment in Latvia, data from the 2007 survey show that in the public

arena, the environment has changed in favour of the Latvian language (Figure 11.1). 64% in 2004, and 74% in 2007 of Russians said that the main place where they heard the Latvian language was in everyday life and on the street.

Less often than in everyday life, non-Latvians hear the Latvian language in the media – 56% on the radio, 64% on TV. It must be stressed, however, that in comparison to the last survey in 2004, there are far more respondents who say that this is the case – in 2004 36% mentioned the radio, and 49% talked about television (Figure 11.1). It is also noteworthy that since the first surveys in the mid-1990s, the presence of the Latvian language had been diminishing in the media world, but the 2007 survey suggests that this is changing. True, there can be various explanations for the data which speak to the presence of the Latvian language in the public space and, particularly, in the mass media. For one thing, it is clear that overall Latvian language skills have improved among non-Latvians over the last few years, and so we can assume that along with this comes an increased ability among Russian speakers to “hear” the Latvian language. The data do not, however, allow one to conclude that consumption of mass media outlets in languages other than Latvian is diminishing.

Least likely to hear Latvian on TV are non-Latvians who live in Rīga. Half (50%) said that they hear Latvian very seldom or not at all. Even in Latgale, the percentage of people who seldom hear Latvian is far smaller (34%). Similarly, 56% of people in Rīga very seldom or not at all hear Latvia on radio, while in Latgale the percentage is 43%. These data suggest that non-Latvians in Rīga are far more likely than people in other parts of Latvia to watch or listen to the media in other languages.

2007 survey data also show that the role of the Latvian language has been on the rise at places of employment, too. 65% of Russian speakers said that they hear Latvian at work. That's more than ever before if we look at the data which have been collected since 1996.

Creating a Latvian language environment for non-Latvians

Asked how best to expand the Latvian language environment for non-Latvians, both Latvians and others say that the best thing to do is to speak Latvian to others (53% and 44%) (Figure 12). Non-Latvians also think that language teaching

processes in schools should be improved, with many respondents mentioning the need for bilingual education (42%). 40% call for cheap or free-of-charge Latvian language courses. Latvians are more likely to feel that non-Latvians should themselves take the initiative of entering the Latvian linguistic environment and trying to speak the language (39%).

Sufficiency and improvements in Latvian language skills

As was the case in 2004, survey data in 2007 also showed an increasing percentage of respondents who rate their own Latvian language skills as sufficient. Those who have poorer skills, of course, are less likely to say so (Figure 13). Among those with very poor skills, only 12% said that they can make do with what they know. Among those at the lowest attested level of language skills, 35% said that their skills are adequate, while among those at the medium level of attestation, fully 81% felt the same.

42% of respondents said that they still need to improve their Latvian language skills (Figure 14.1). Of course, this was less common among those with the medium or highest level of attested language skills.

In the group aged 15 to 50, one-half (50%) said that they would like to improve their Latvian language skills to a further degree (Figure 14.2).

When people who said that they do not wish to improve their Latvian language skills were asked why this was, the largest percentage (51%) said that it was because their skills were already sufficient (Figure 15). It should be noted that 11% felt that they would never need any Latvian language skills at all.

Methods for learning the Latvian language

Asked about the best way to learn the Latvian language, 49% of non-Latvian respondents spoke of language courses, 31% plumped for private tutoring, 17% spoke of textbooks and television programmes, 19% mentioned educational programmes on

the Internet, and far fewer felt a need for audio and video cassettes (5-6%) or CDs (4%) (Figure 16.1).

Asked how much they would be prepared to spend for Latvian language courses, people have pretty much been saying the same thing ever since 1996 – they would be ready to spend around Ls 14 for the process. In 2007, however, the average sum had increased to Ls 19. (Figure 17.2).

Information about distance learning

The survey data show that there is more information each year about distance learning opportunities in Latvia. In 2000, only 17% of survey respondents even knew what distance learning is, while in 2007, the same was true among 47% of respondents (Figure 18). 23% of non-Latvians felt that distance learning might be of use to them, 61% did not think so, and 16% did not know (Figure 19). People in Rīga and Latgale would be more likely than others to make use of distance learning.

Difficulties in Latvian language learning

The percentage of respondents who say that they have specific difficulties in learning the Latvian language has diminished from 56% in 1996 to just 33% in 2007 (Figure 20). This indicates that non-Latvians consider the Latvian language to be closer and more accessible now than they did in the past. Asked about obstacles against learning the language, respondents speak of age (33%), a lack of opportunities to practice the Latvian language (24%), a psychological barrier against the language (24%), the complexity of Latvian grammar (19%), the complexity of the language as such (17%), a lack of time (17%), a poor memory (15%), and financial problems (8%) (Figure 21).

The press, radio and television in Latvian

Survey data show that after the turn of the millennium, the percentage of Russian speakers in Latvia who made use of the Latvian mass media gradually began to decline – 72% watched television in Latvian in 2004, as opposed to 82% in 2002. The same was true for newspapers (35% as opposed to 45%) and magazines (27% and 34%). The exception was the radio, where there were no changes (Figure 22). Data from the 2007 survey, however, show that the popularity of the Latvian language mass media has recovered among Russian speakers over the last three years.

Non-Latvians in Rīga, it must be said, make less use of Latvian language mass media outlets than do non-Latvians in other towns and in the countryside.

Among Latvian magazines, the most popular ones in the Russian speaking community are *Privātā Dzīve* (17% of non-Latvians report reading it), *Ieva* (11%), *Santa* (8%), *Cosmopolitan* (7%), and *Mūsmājas* (6%) (Figure 23).

Among newspapers, the most popular ones are regional or local newspapers (19%), *Diena* (16%), *5 min.* (12%), *Neatkarīgā Rīta Avīze* (8%), *Vakara Zīnas* (7%), *Rīgas Santīms* (6%), and *Latvijas Avīze* (5%) (Figure 24).

Asked about television channels on which programmes are shown in Latvia, non-Latvians most often cited LNT (36%) and TV3 (26%). The first and second channel of Latvian Public Television were less popular – 14% and 14.5%), as were TV5 (12%) and regional channels (6%) (Figure 25).

Asked what kinds of shows they watch on TV, non-Latvians most often spoke of feature films and serials (39%), the news (18%), game shows (13%), entertainment and humour programmes (9%), and sports (7%) (Figure 25).

The LNT news programme is the most popular show of its kind among non-Latvians, with 29% of Russian speakers watching it. The Latvian Public Television news programme “Panorama” lags behind at 18%.

The most popular Latvian radio stations among non-Latvians are Radio SWH (21%), Radio Skonto (19%), Radio Latvia 2 (16%), Star FM (13%), Radio Latvia 1 (8%) and European Hit Radio (6%) (Figure 26).

When Russian speakers are asked what keeps them from reading, listening to or watching the Latvian language mass media, they are less likely now than in the past to attribute this to inadequate Latvian language skills or a lack of money. Instead, respondents this year have been more likely to speak of personal preference (Figure 28).

Importance of various languages

Almost everyone in Latvia says that the status of the Latvian language is stable and widely recognised. 96% of respondents say that it is important for each and every resident of Latvia to speak the Latvian language (Figure 30.1). The importance of the English and the Russian language is also stated by very many respondents – 81% think that people should be able to speak English, and 79% feel that it is important to have a free command of the Russian language.

If one breaks this answer down by nationality, then one finds that both Latvians and Russian speakers feel that everyone in Latvia must speak Latvian (98% of Latvians, 91% of non-Latvians) (Figure 30.2). There are substantial differences, however, in views about the Russian language. Only 70% of Latvians feel that it is important to speak the language, while 92% of Russian speakers do the same (Figure 30.3).

Interestingly, the percentage of Latvians who feel that it is important for everyone in Latvia to speak the Russian language freely has been increasing since 2002 – 56% back then, 70% this year. The same is true of Russian speakers who support the idea that Latvian must be spoken – 87% in 2002, and 91% in 2007. These are not unambiguous data. On the one hand, they indicate competition among languages, because people feel that it is important to speak both languages. On the other hand, the data suggest that there is now greater tolerance vis-à-vis languages, because in both ethno-linguistic groups, people are more likely to recognise the importance of the other language.

The importance of the English language is also very high in Latvia – 84% of Latvians and 77% of Russian speakers consider it important to learn that language (Figure 30.4). Here we see similar views in both groups.

The Latvian language in minority schools

87% of surveyed Latvians and 51% of Russian speakers support the idea that classes in minority schools should be taught in Latvian. If we break the answers down by level of Latvian language skills among Russian speakers, then we see that the higher the level of language skills, the more likely the respondent is to support the teaching of classes in Latvian. Those parents who have the highest attested level of Latvian language skills, however, have more polarised views. Those who favour classes taught in Latvian and those who oppose the idea are almost equal in number in that group.

Selection of schools

The 2007 survey shows that increasing numbers of minority parents choose to send their children to schools where classes are taught in Latvian (31% in 2004, 49%, or nearly one-half, in 2007). In 2004, 68% of children with Russian speaking parents studied at a bilingual school. In the latest survey, only 52% of respondents reported that this was the case (Figure 32). Parents with good Latvian language skills are more likely than parents with poorer skills to choose to send their kids to a school where classes are taught in Latvian.

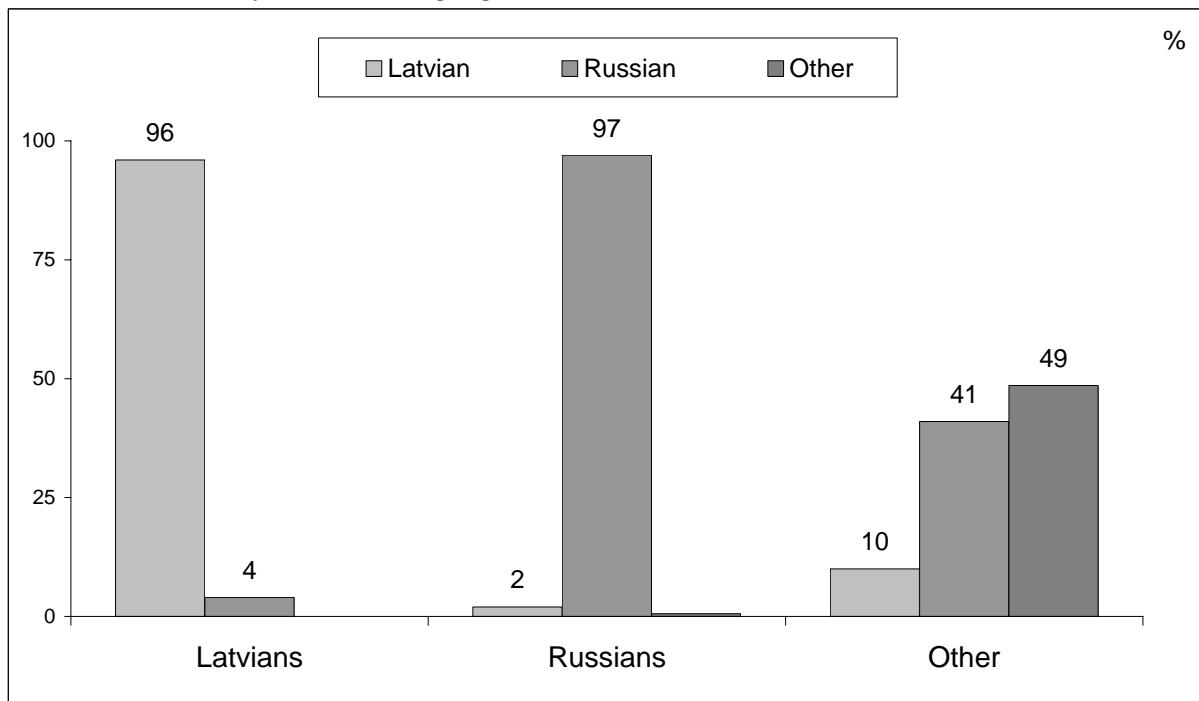

Asked why they select a Latvian school for their children, Russian speaking parents talk about their desire for the children to learn both the Latvian language and their native language, as well as about the hope that the kids won't have any problems with the Latvian language (Figure 33). This year more than in 2004 parents also said that Latvian schools offer a higher level of educational quality (Figure 33).

Among those parents who send their children to schools where classes are taught in Russian, respondents spoke of the desire for their children to have a better command of both: their native language and Latvian. Others had purely everyday reasons for the choice (Figure 33).

CERTIFICATION OF KNOWLEDGE OF LATVIAN

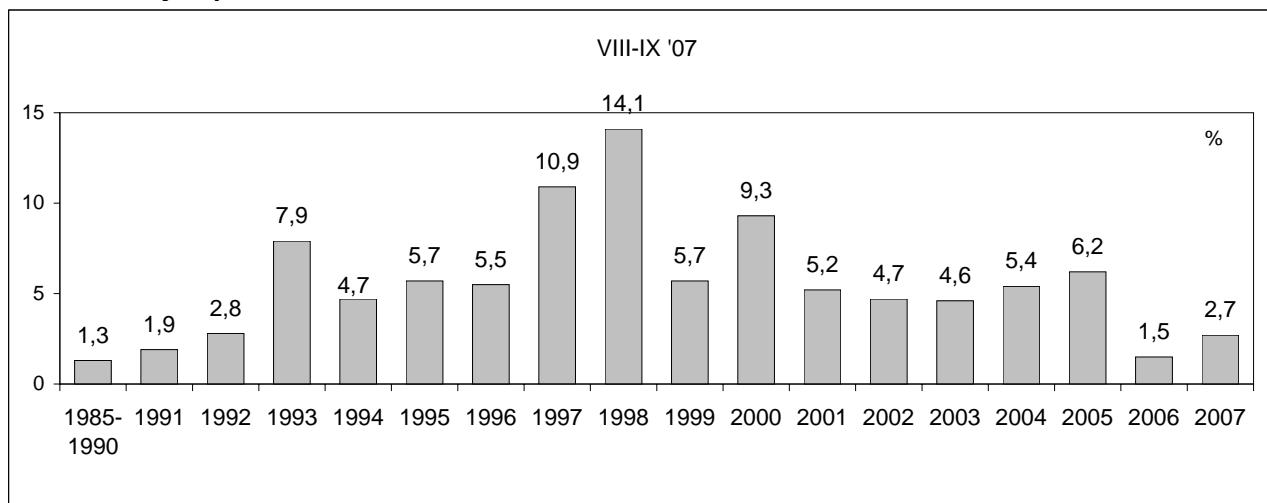

7. Did you pass the certification in Latvian language?

If yes, what level have you passed the last time?

All respondents whose native language is not Latvian, n=627

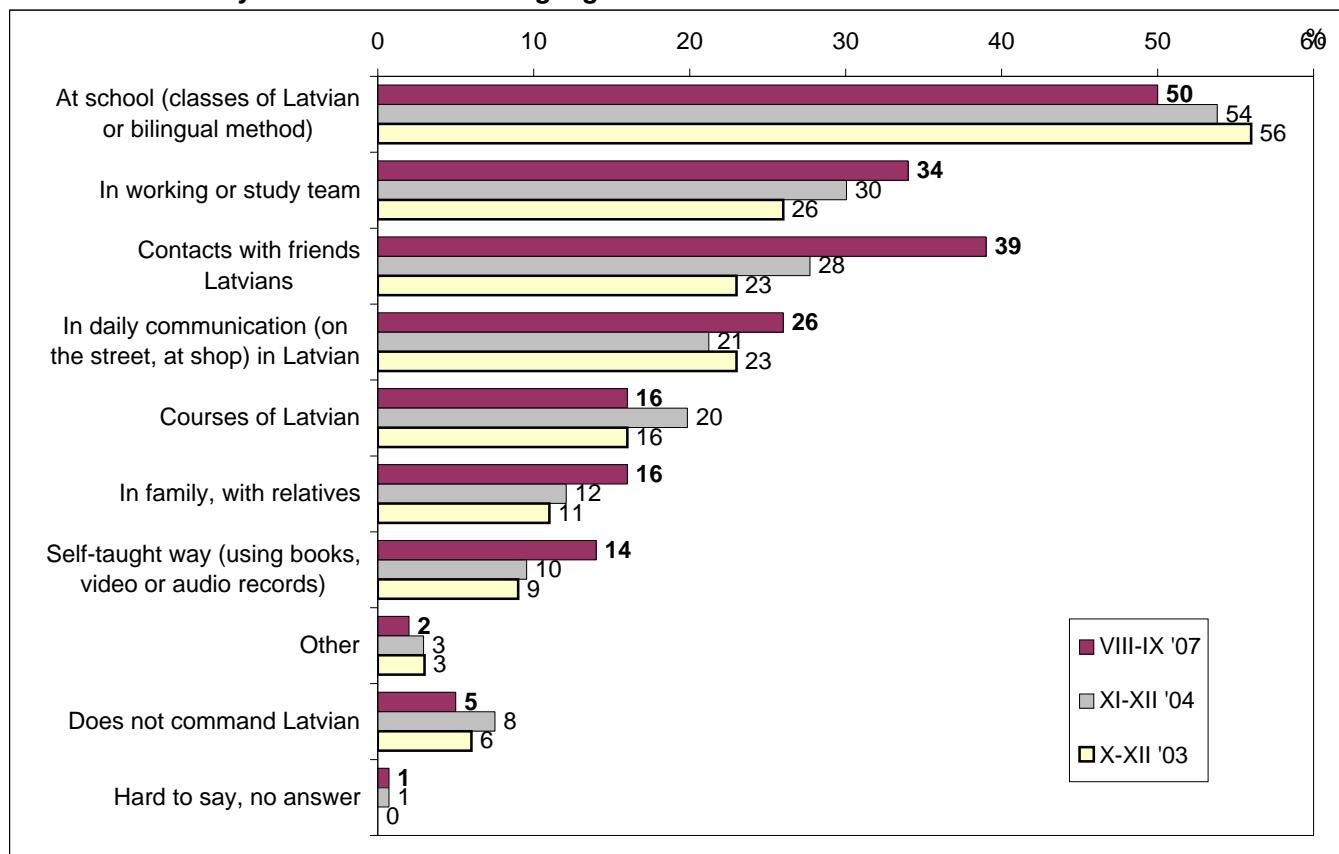

8. When did you pass the certification?

All respondents whose native language is not Latvian, who passed the certification and gave certain answer , n=236

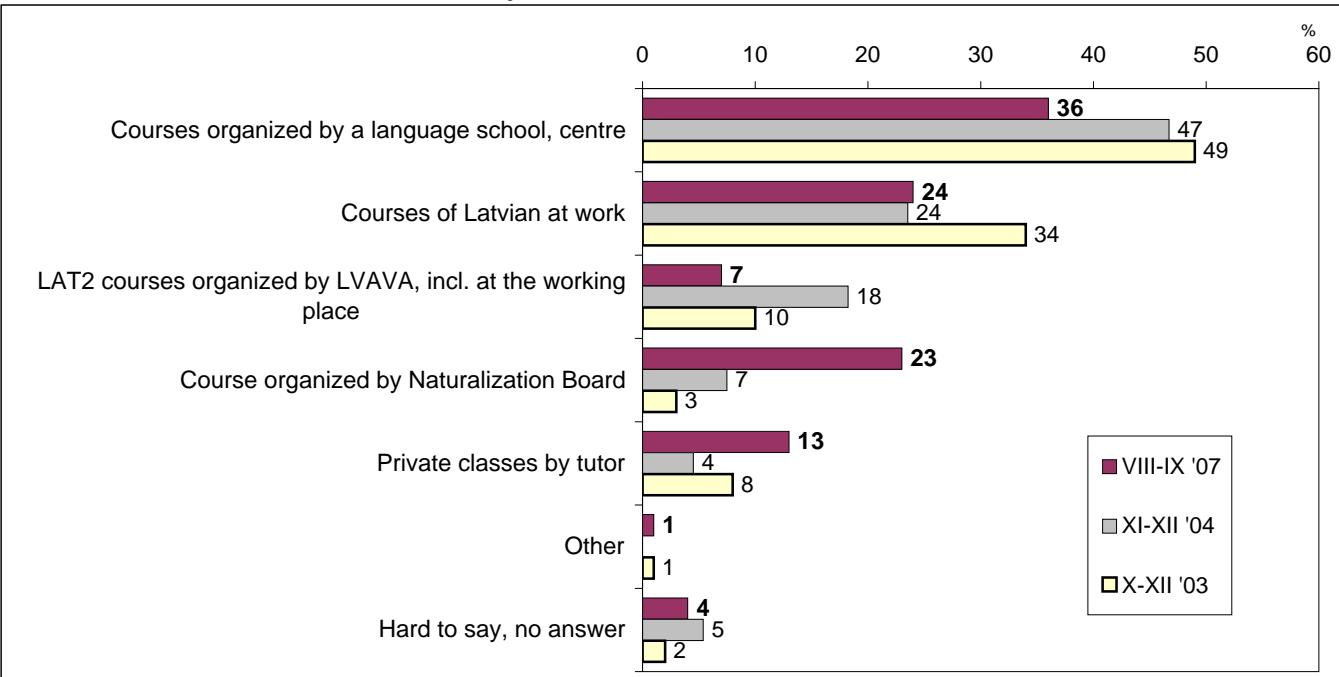

MASTERING OF LATVIAN

9. Where and how you learned Latvian language?

All respondents whose native language is not Latvian, X-XII '03 - n=842, XI-XII '04 - n=849, VIII-IX '07 - n=627
more than one answer, sum of % >100

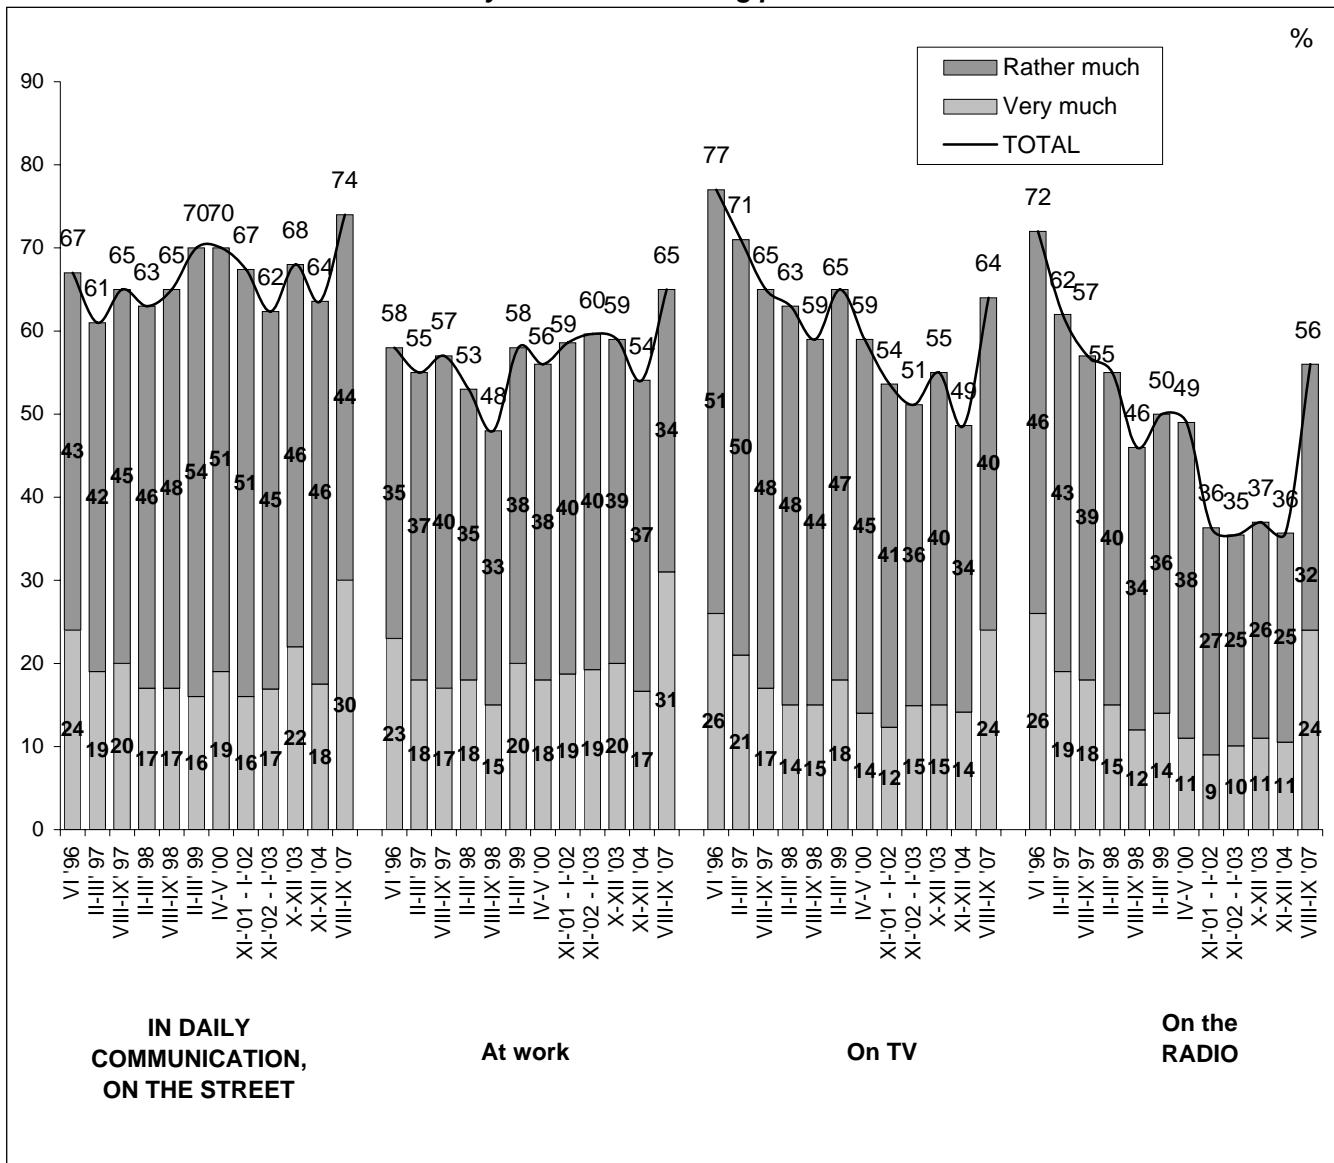

10. What kind of courses of Latvian did you use?

All respondents who took language courses in Latvian, X-XII '03 - n=126, XI-XII '04 - n=170
VIII-IX '07 - n=100
more than one answer, sum of % >100

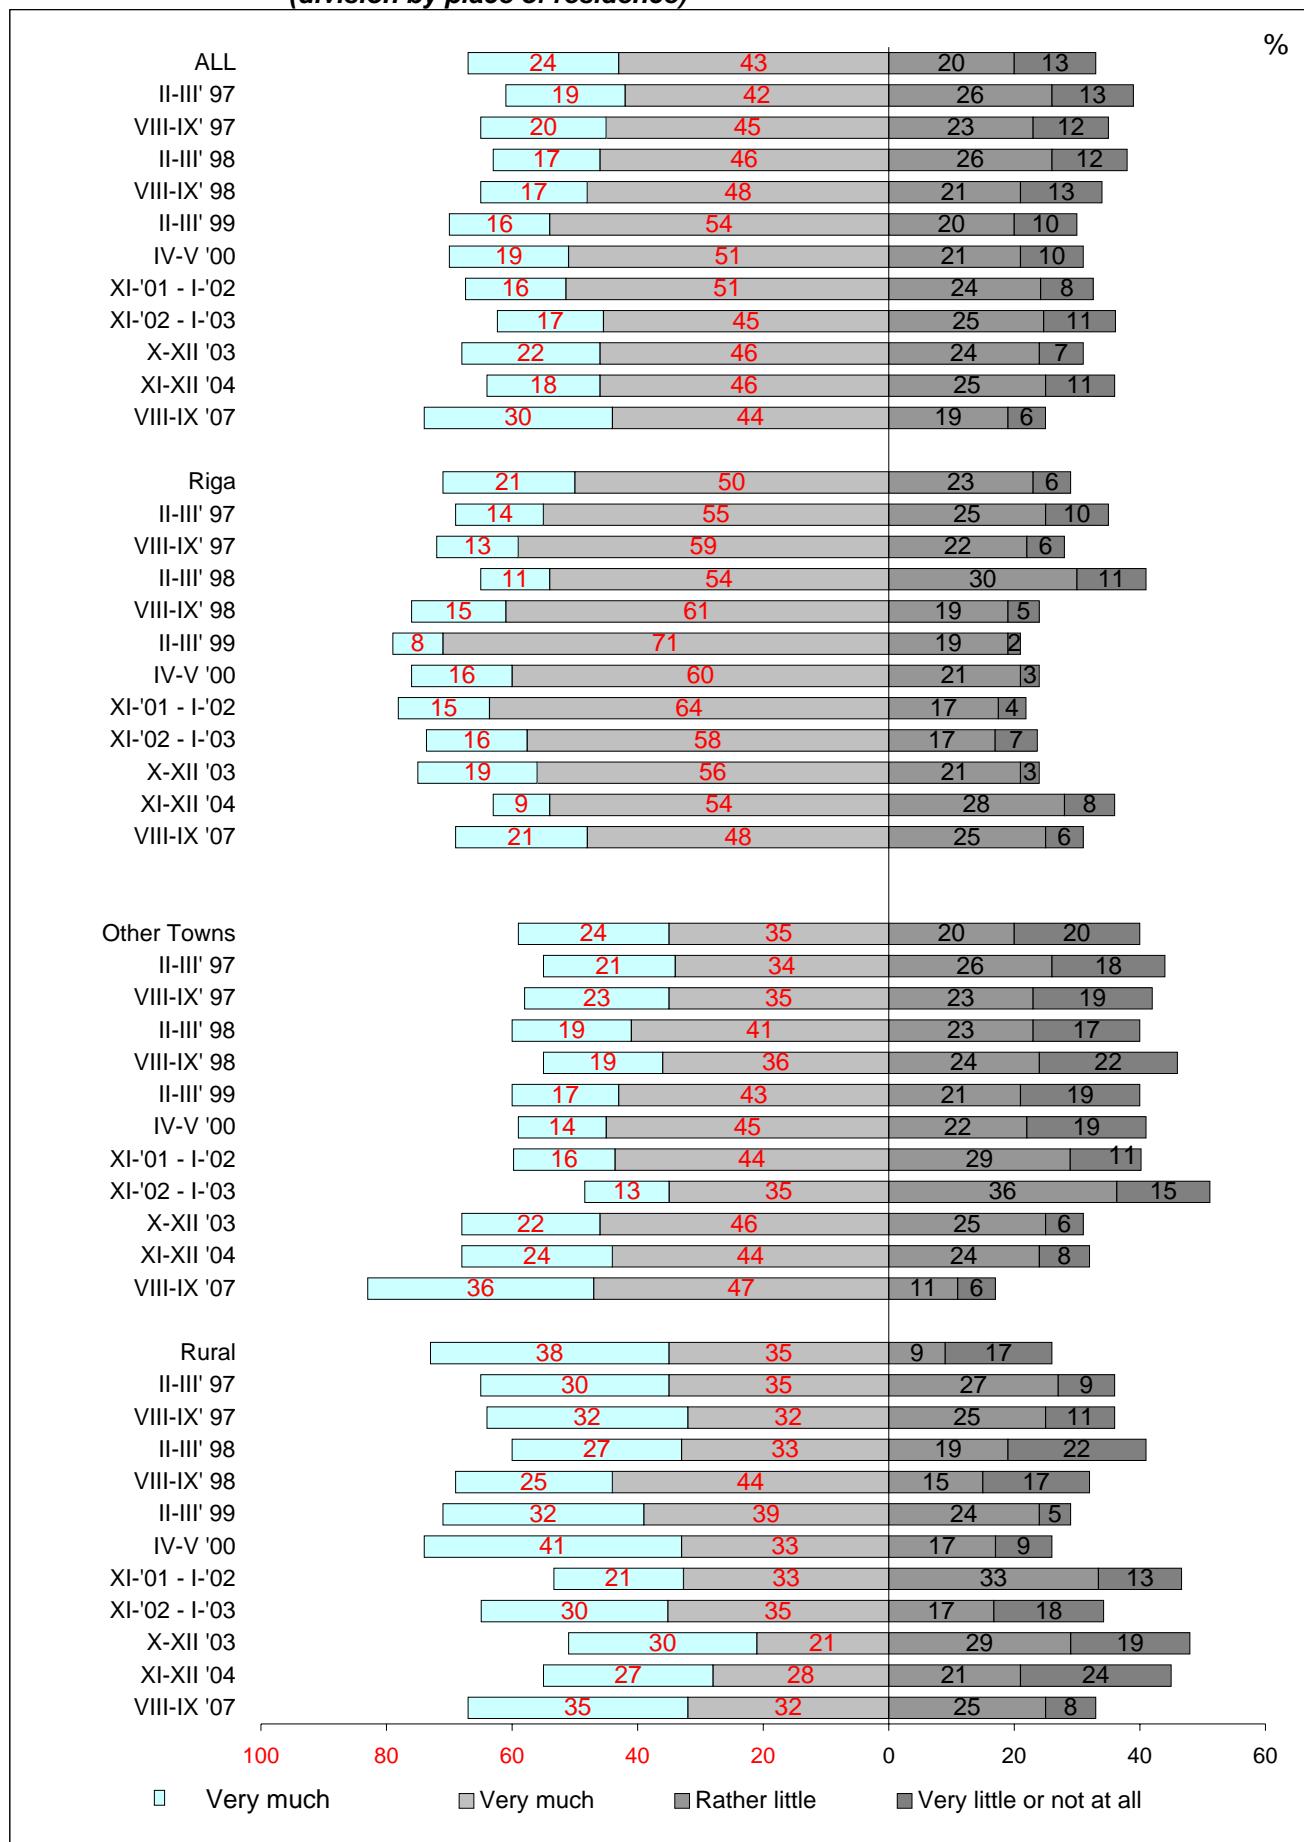

LANGUAGE ENVIRONMENT

11.1. How much Latvian do you hear at following places?

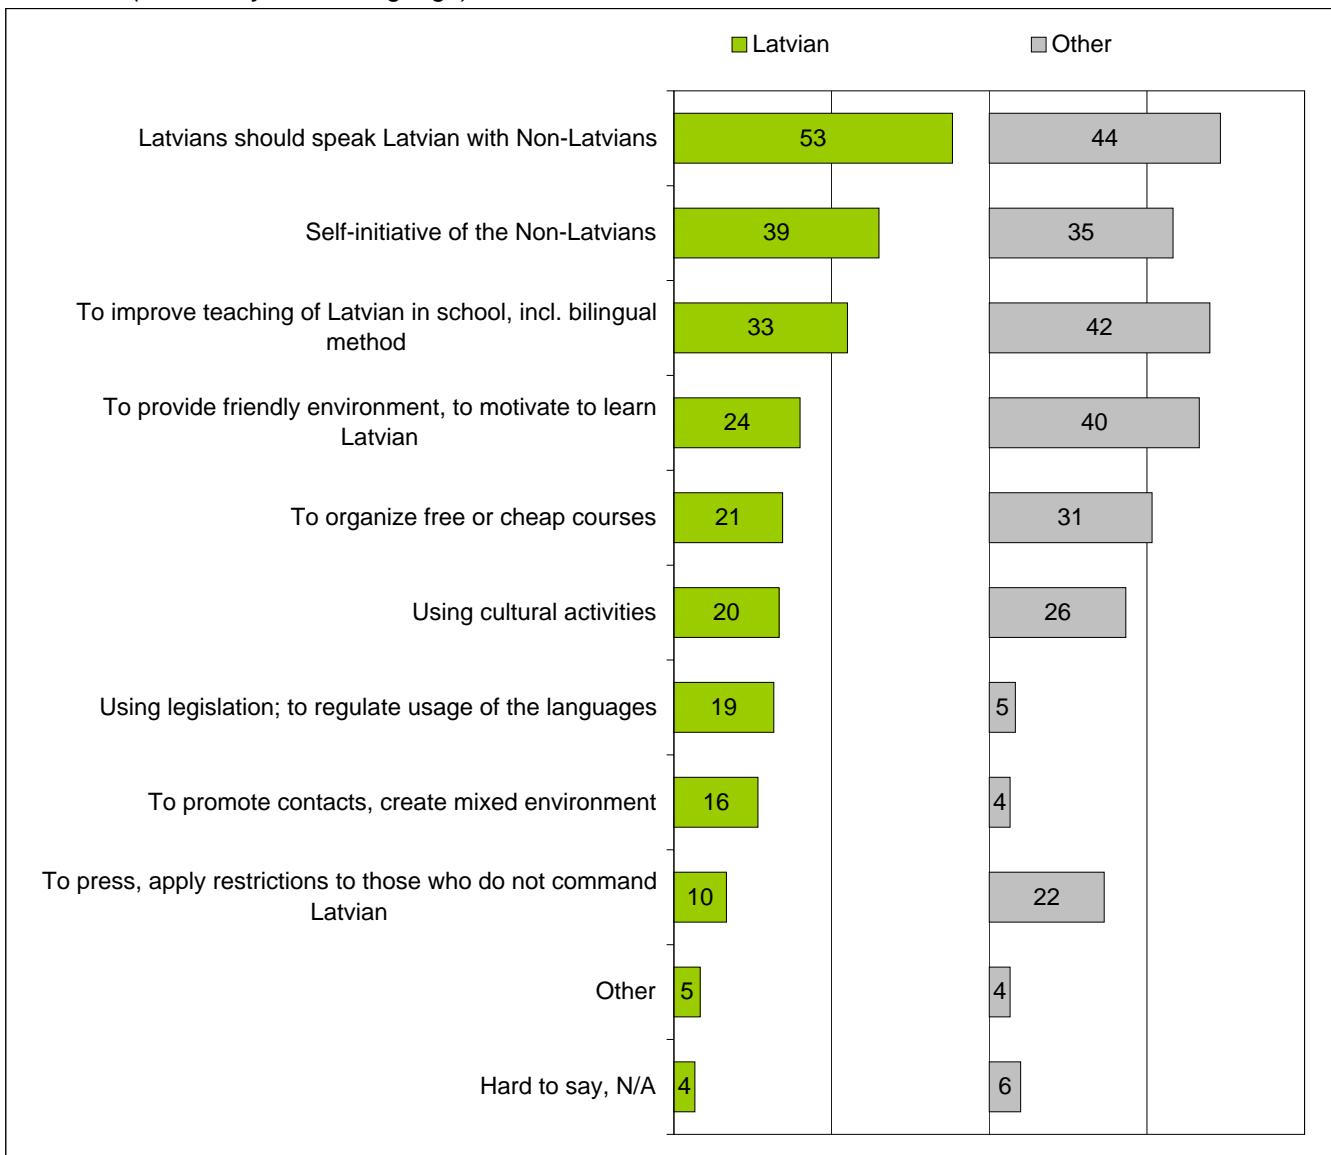

All respondents whose native language is not Latvian, n=627

**11.2. How much Latvian do you hear in daily communication, on the street?
(division by place of residence)**

All respondents whose native language is not Latvian, n=627

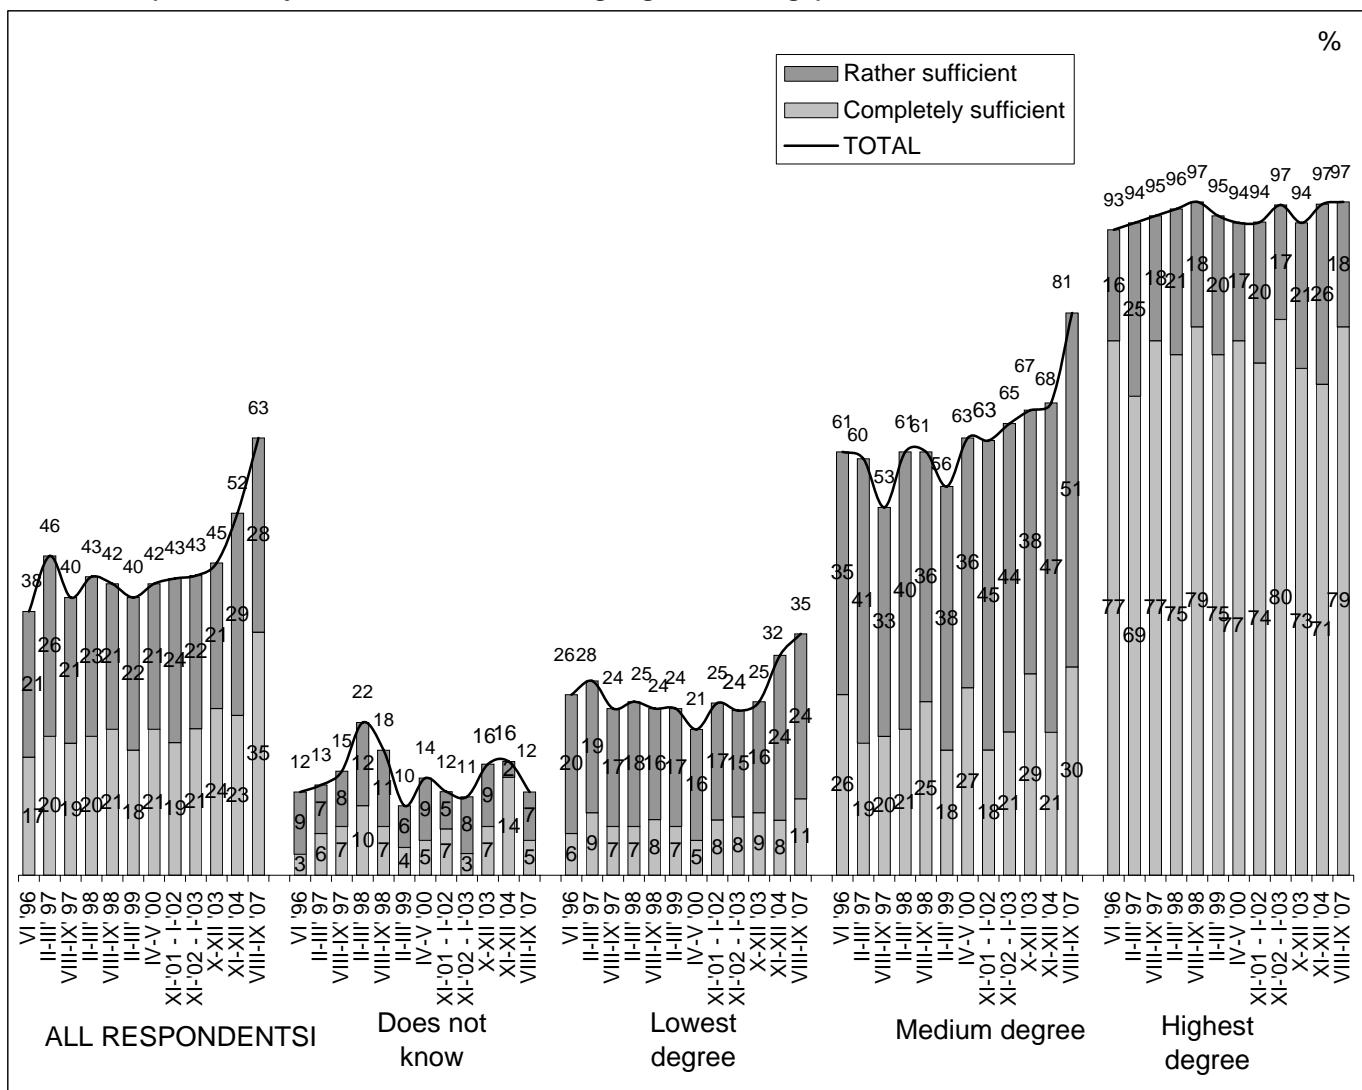

12. How it is possible to promote Latvian language environment for the Non-latvians?
 (division by native language)

All respondents;
 more than one answer, sum of % >100

SUFFICIENCY OF LANGUAGE KNOWLEDGE

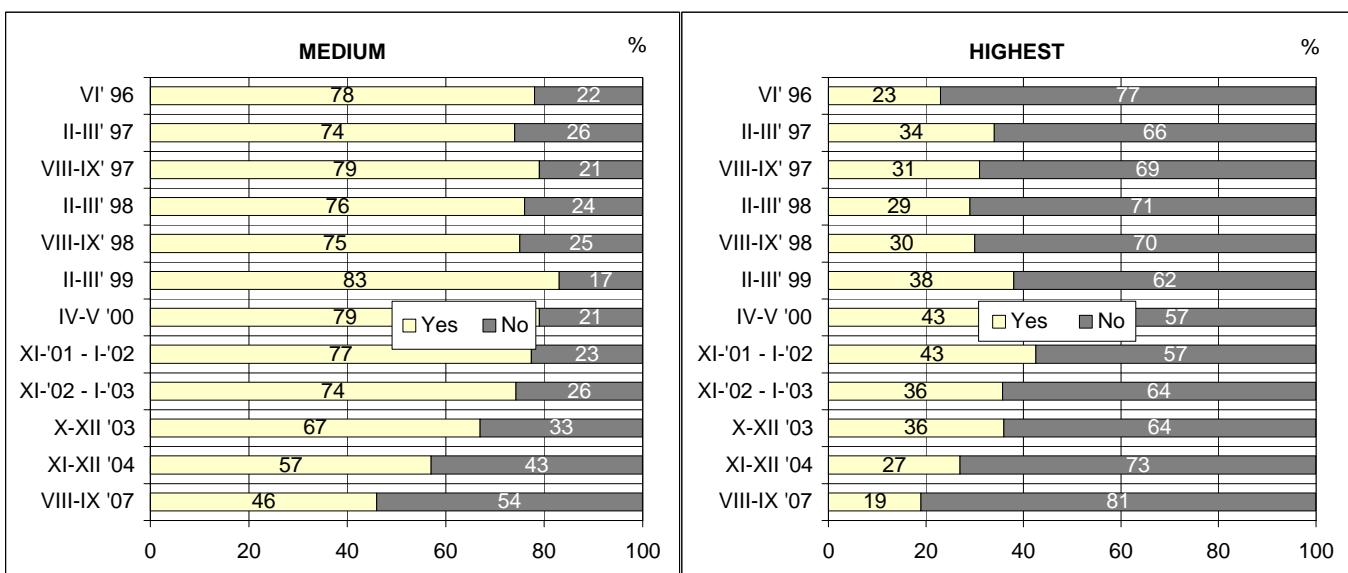

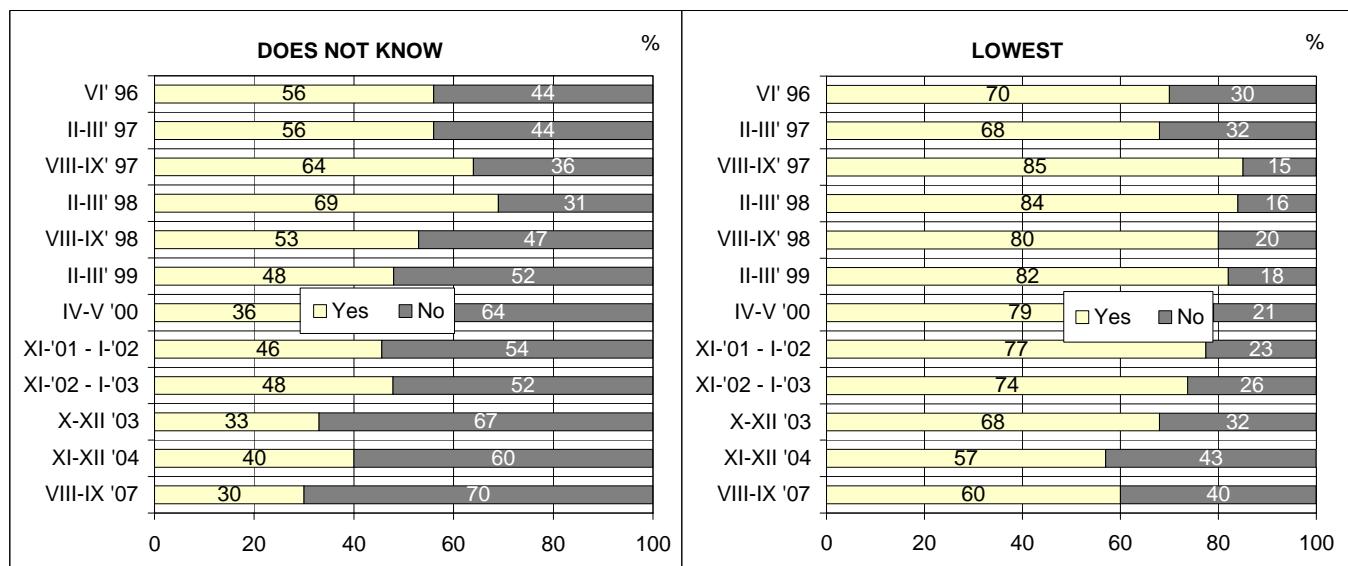

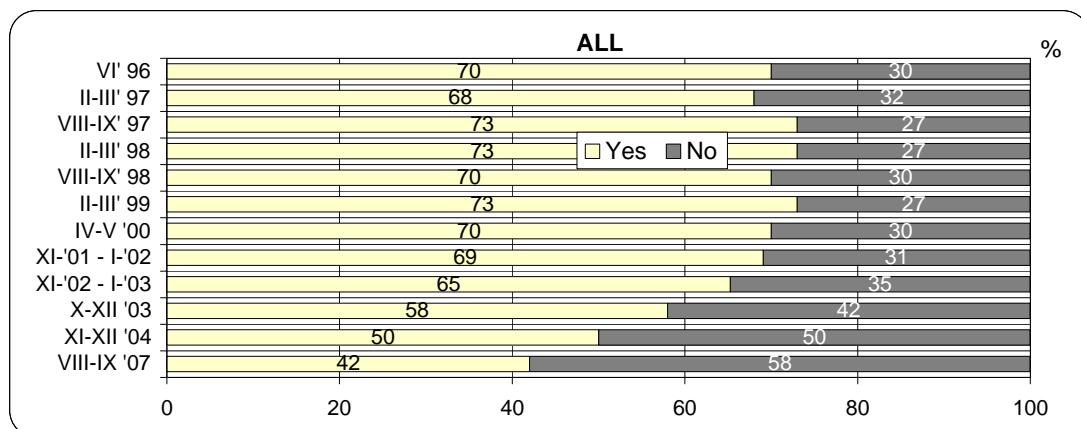

13. In your opinion - how sufficient or insufficient is your knowledge of Latvian in order to organize everyday business and perform work duties?
(division by level of the Latvian language knowledge)

All respondents whose native language is not Latvian; n=627

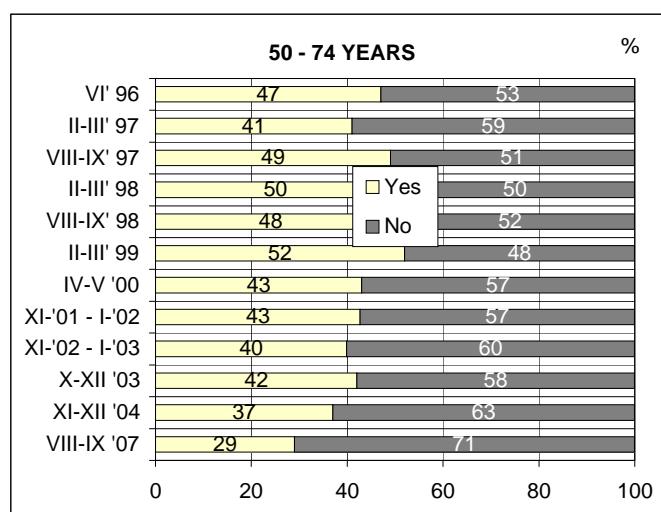

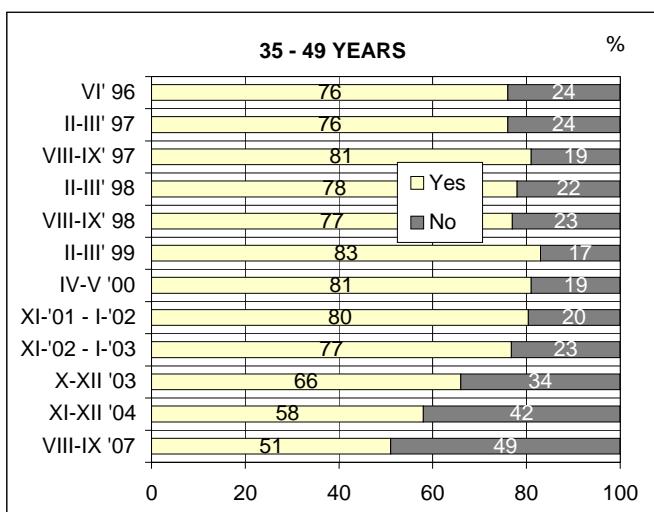

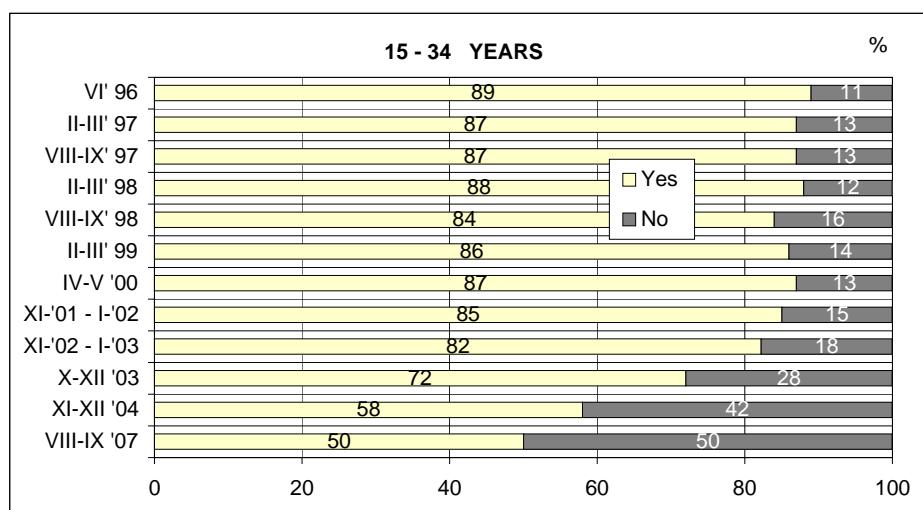

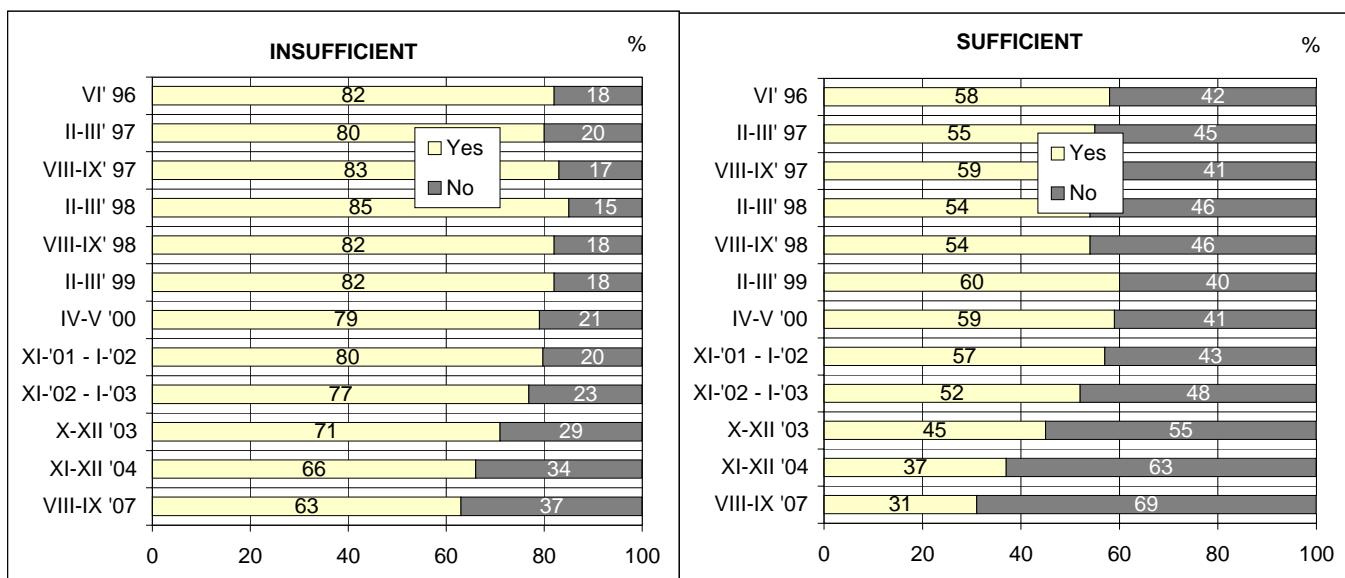

IMPROVEMENT OF LANGUAGE KNOWLEDGE

14.1. Would you like to improve your knowledge of Latvian?
 (division by level of the Latvian language knowledge)

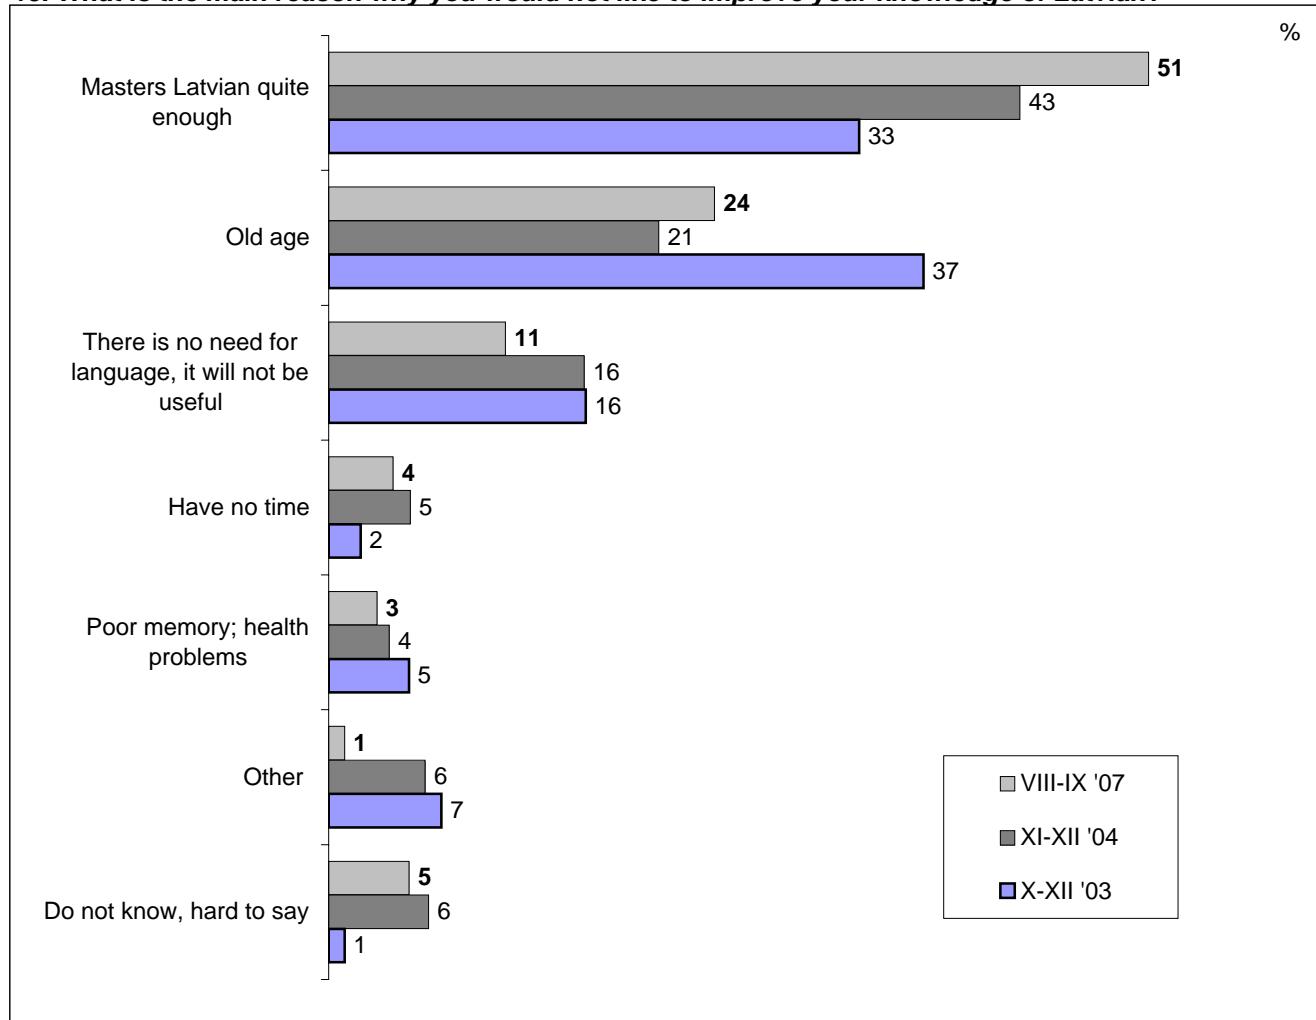

All respondents whose native language is not Latvian, n=627

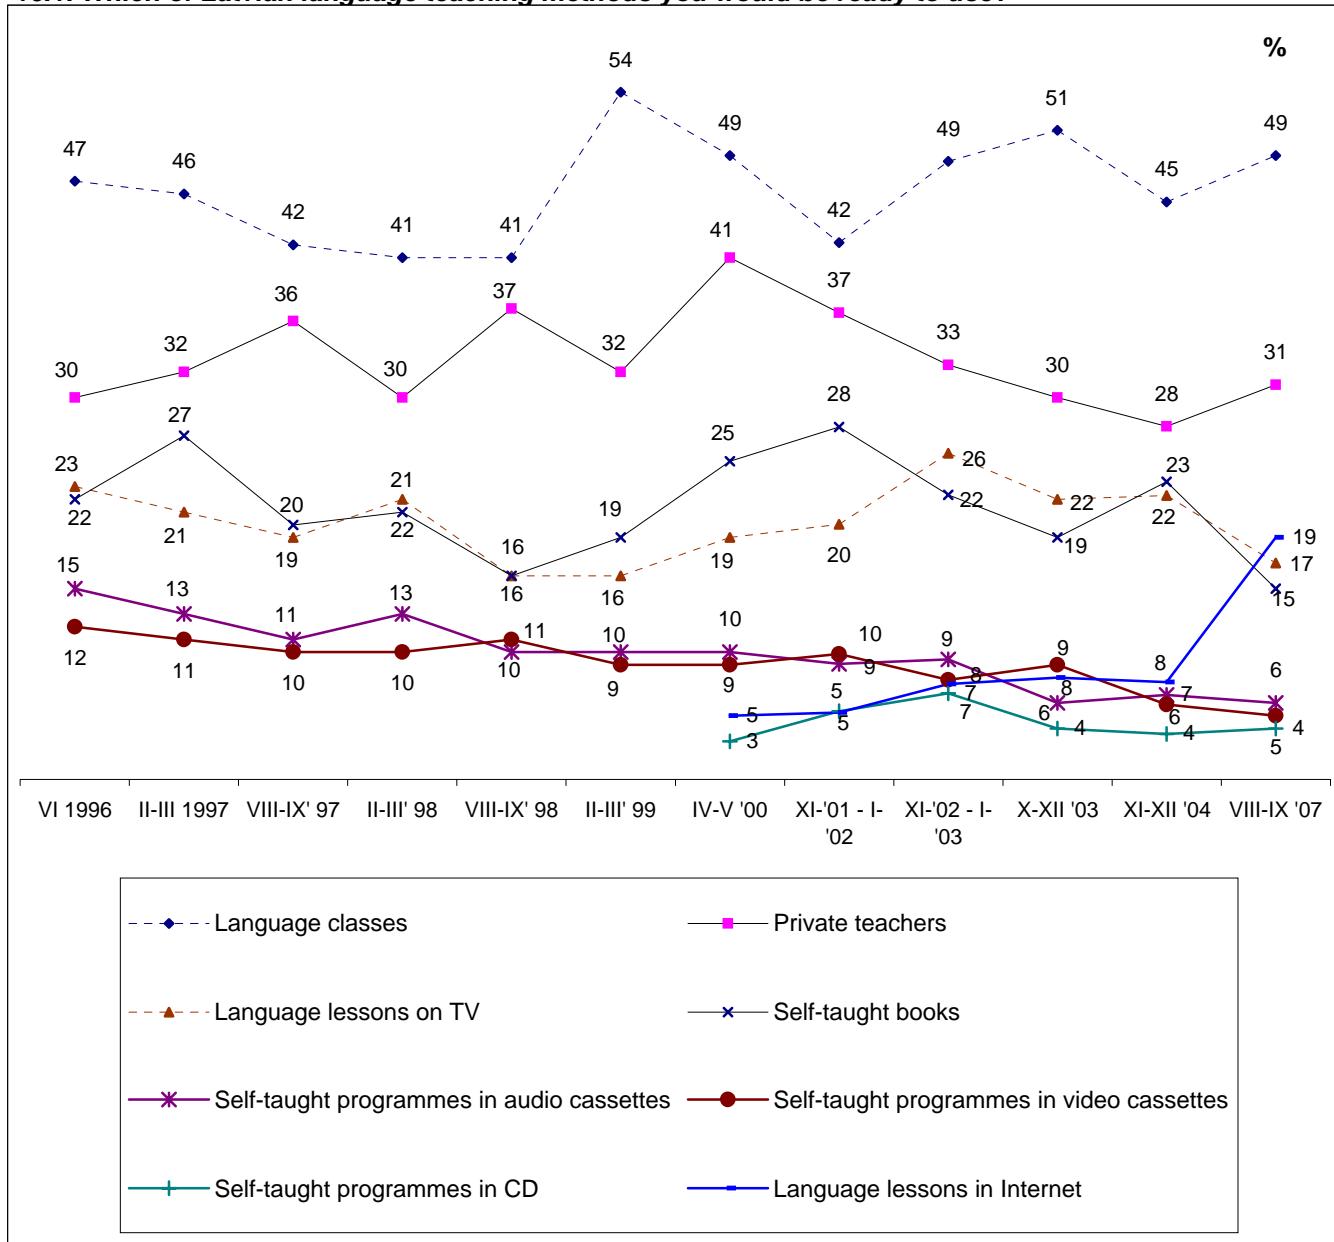

14.2. Would you like to improve your knowledge of Latvian?
 (division by self-evaluation of knowledge of Latvian and age group)

All respondents whose native language is not Latvian, n=627

15. What is the main reason why you would not like to improve your knowledge of Latvian?

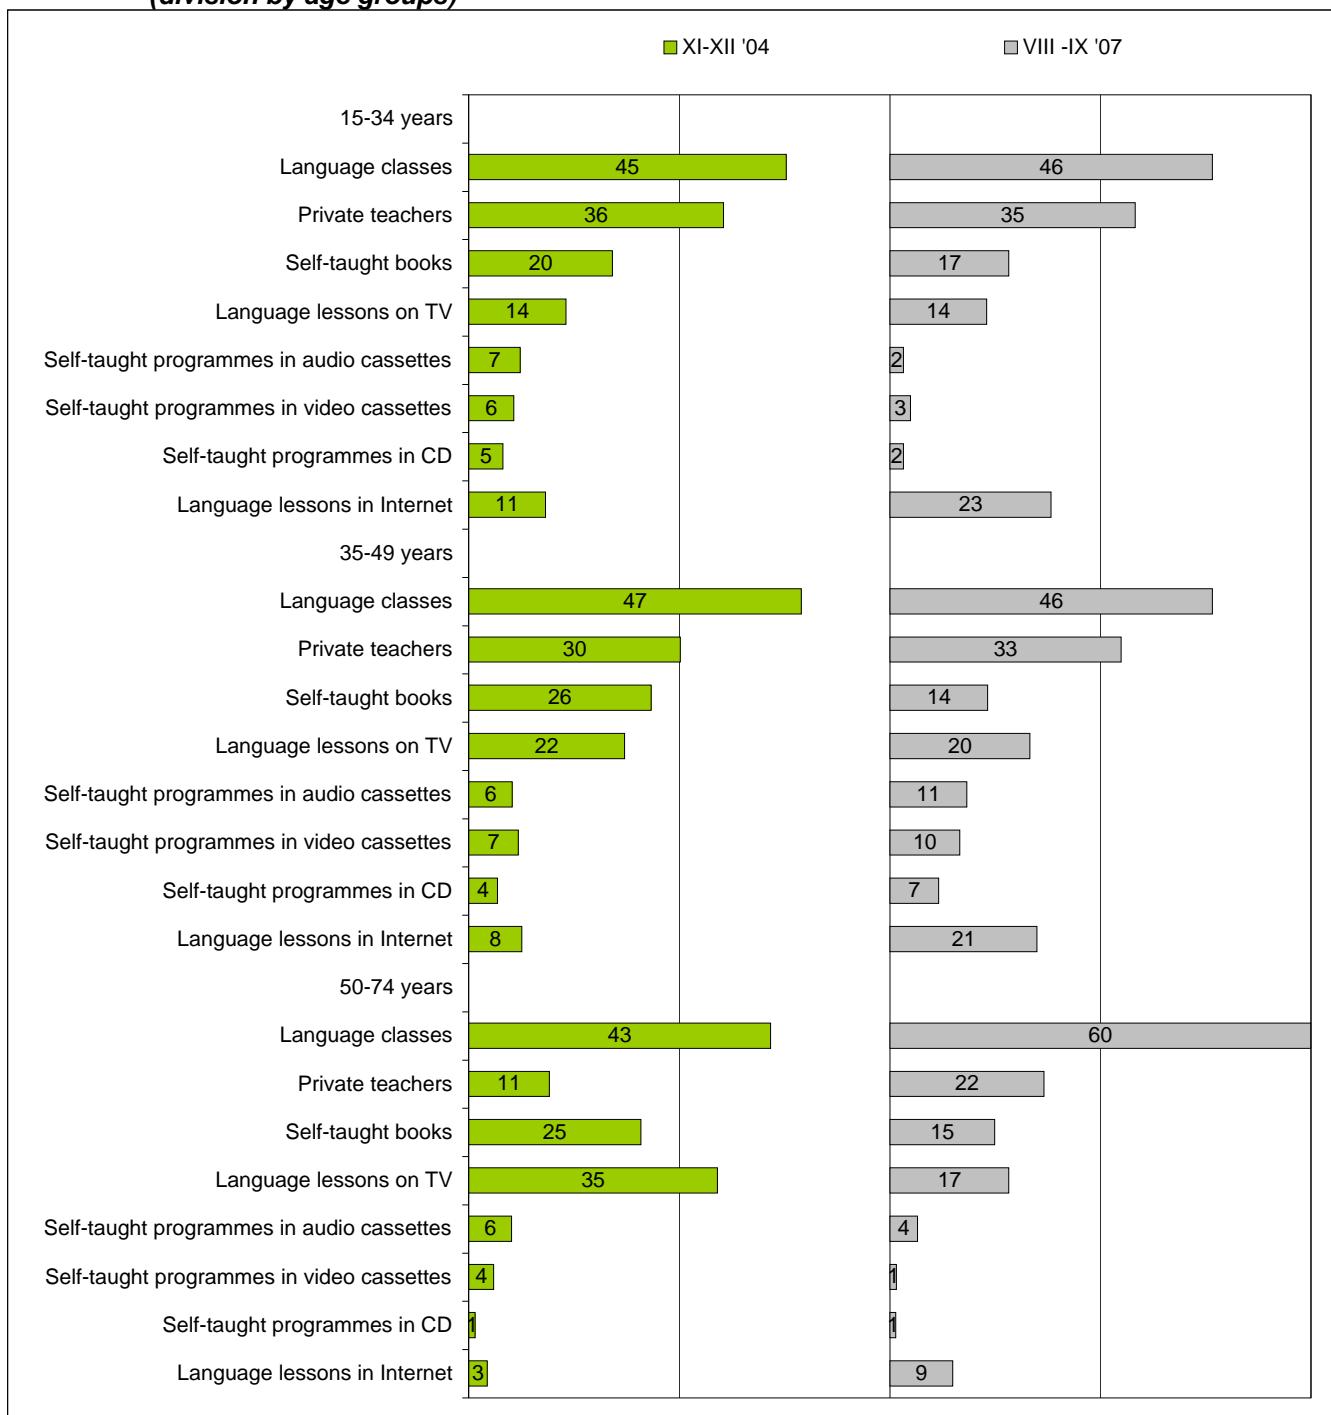

All respondents, who would not like to improve their knowledge of Latvian,
X-XII '03 - n=380, **XI-XII '04** - n=427, **VIII-IX '07** - n=378

16.1. Which of Latvian language teaching methods you would be ready to use?

All respondents, whose native language is not Latvian and who would like to improve their Latvian language knowledge, n=228

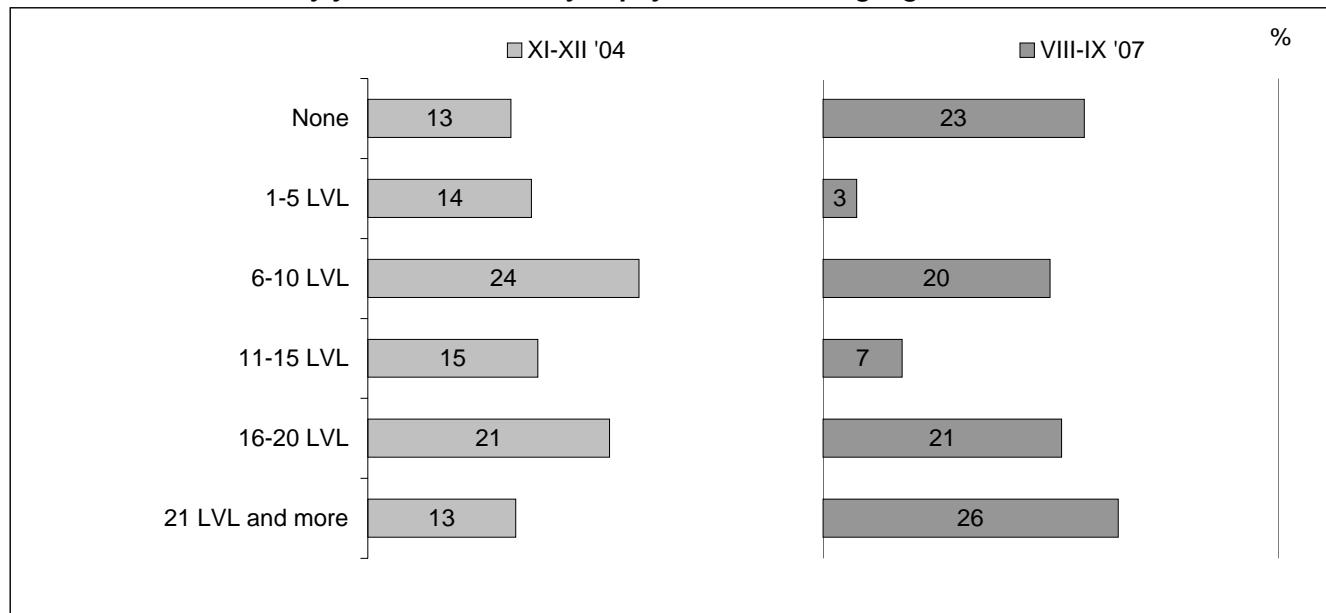

more than one answer, sum of % >100

**16.2. Which of Latvian language teaching methods you would be ready to use?
(division by age groups)**

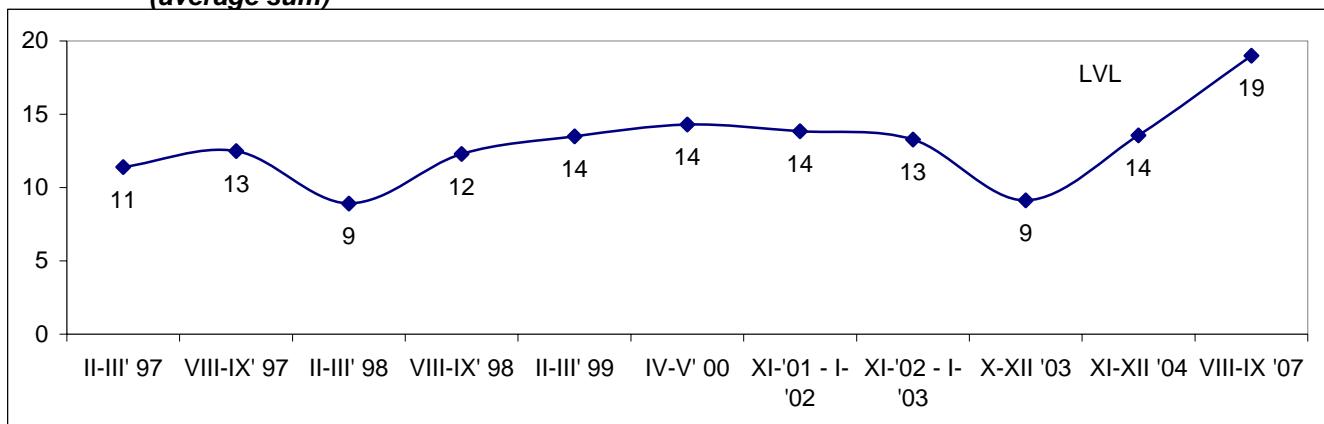

All respondents, whose native language is not Latvian and who would like to improve their Latvian language knowledge; XI-XII '04 - n=422, VIII-IX '07 - n=228
more than one answer, sum of % >100

17.1. What sum of money you would be ready to pay for Latvian language classes?

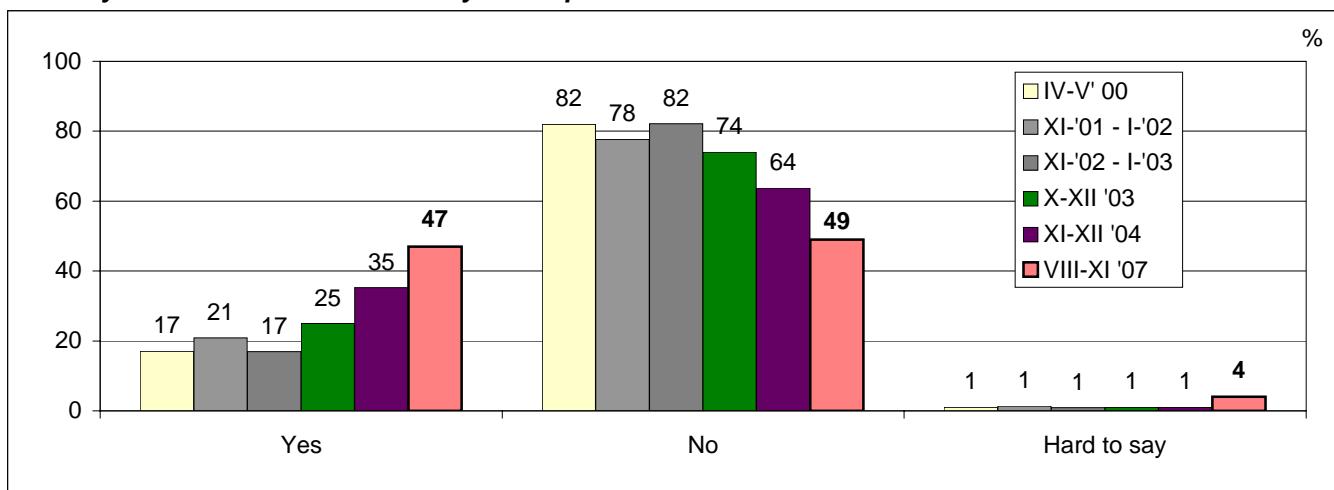

All respondents, whose native language is not Latvian, who would be ready to attend the Latvian language classes and have given a certain answer to this question; XI-XII '04 - n=155, VIII-IX '07 - n=67

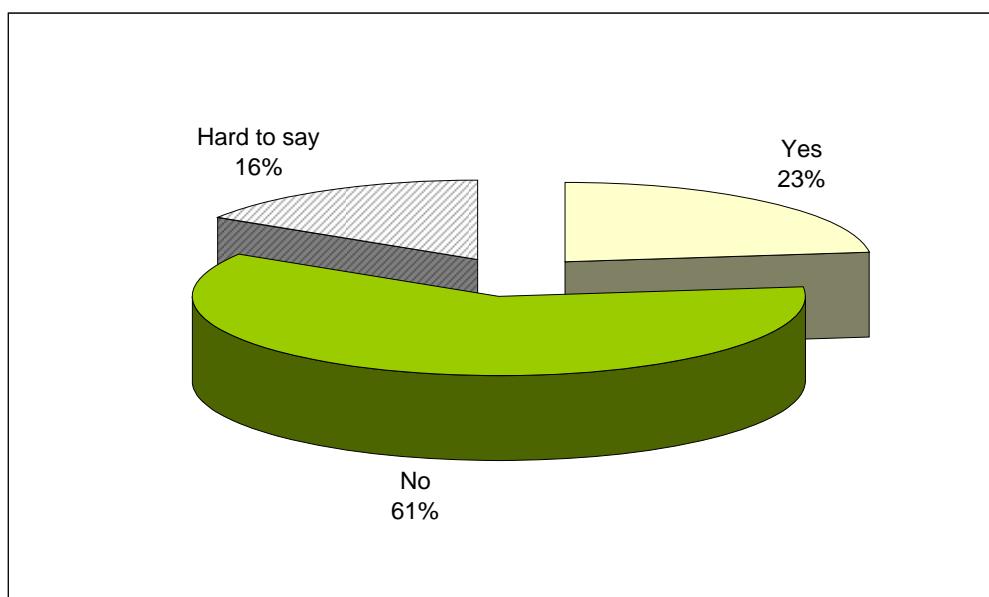

**17.2. What sum of money you would be ready to pay for Latvian language classes?
(average sum)**

All respondents, whose native language is not Latvian, who would be ready to attend the Latvian language classes and have given a certain answer to this question n=67

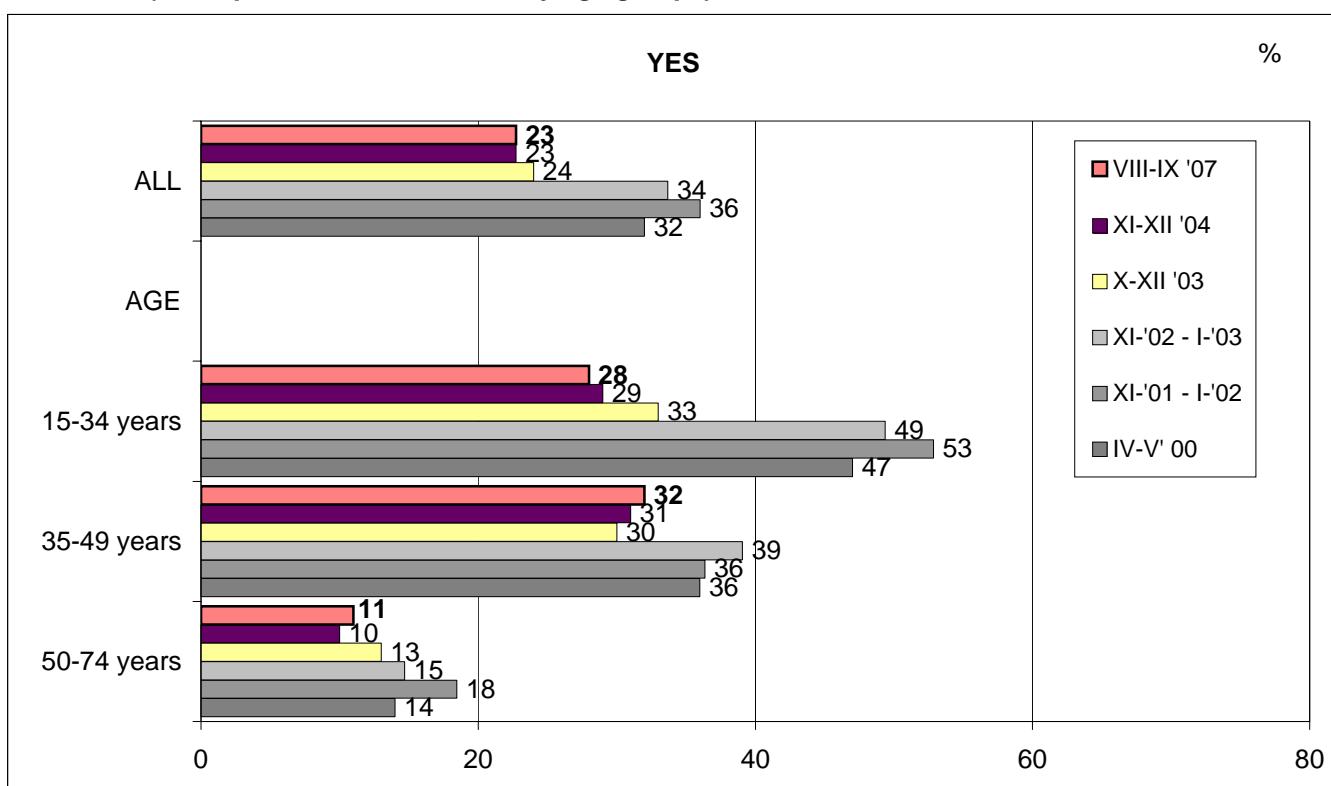

18. Do you know what is a course by correspondence?

All respondents whose native language is not Latvian, n=627

19.1. Do you think the course of Latvian by correspondence would be useful for you?

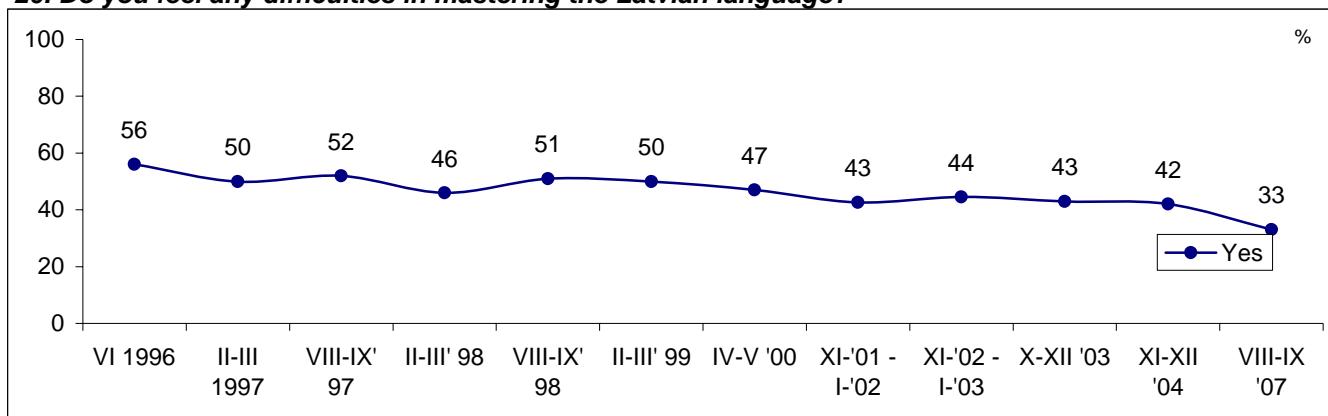

All respondents whose native language is not Latvian, n=627

**19.2. Do you think the course of Latvian by correspondence would be useful for you?
(all respondents and division by age groups)**

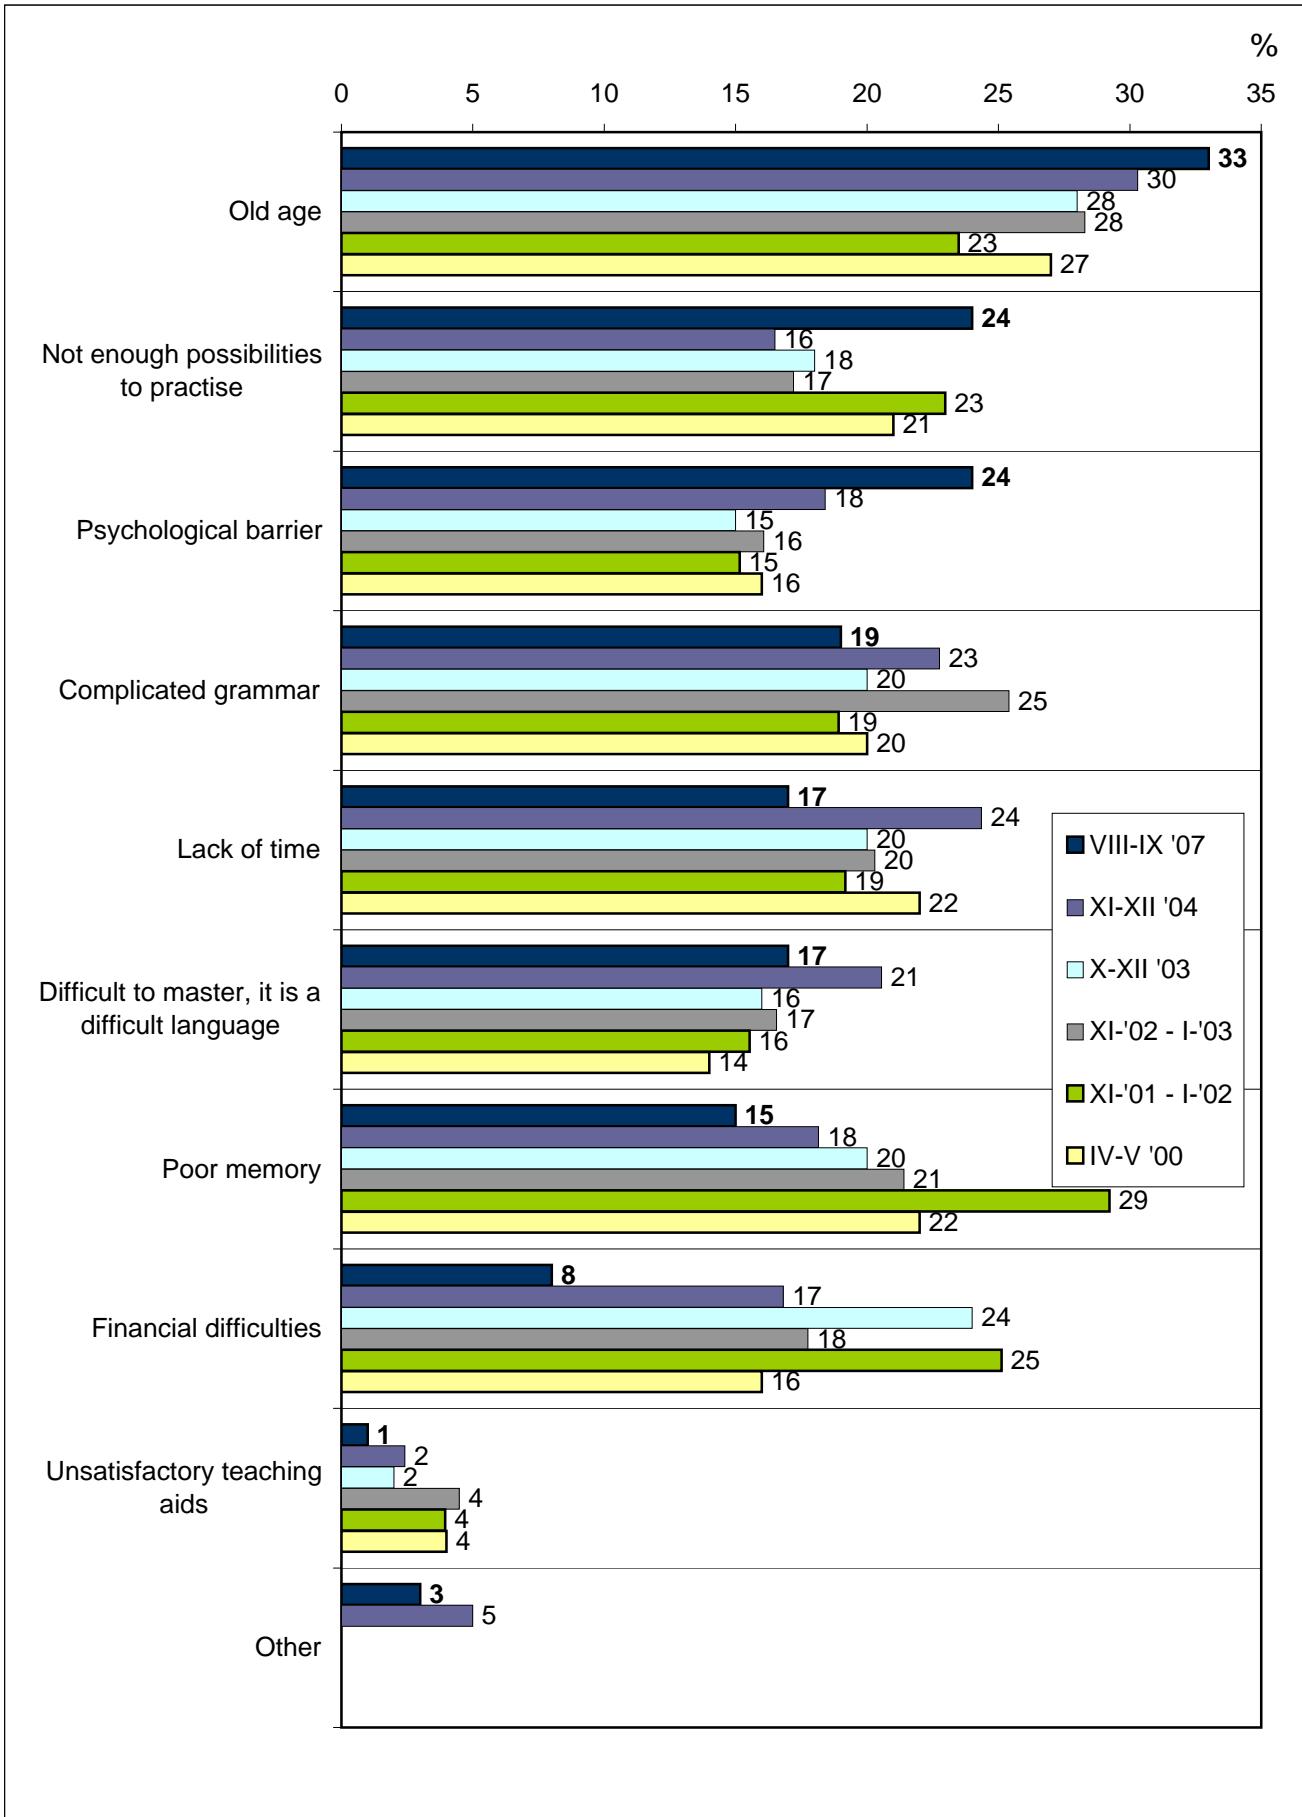

All respondents whose native language is not Latvian, n=627

20. Do you feel any difficulties in mastering the Latvian language?

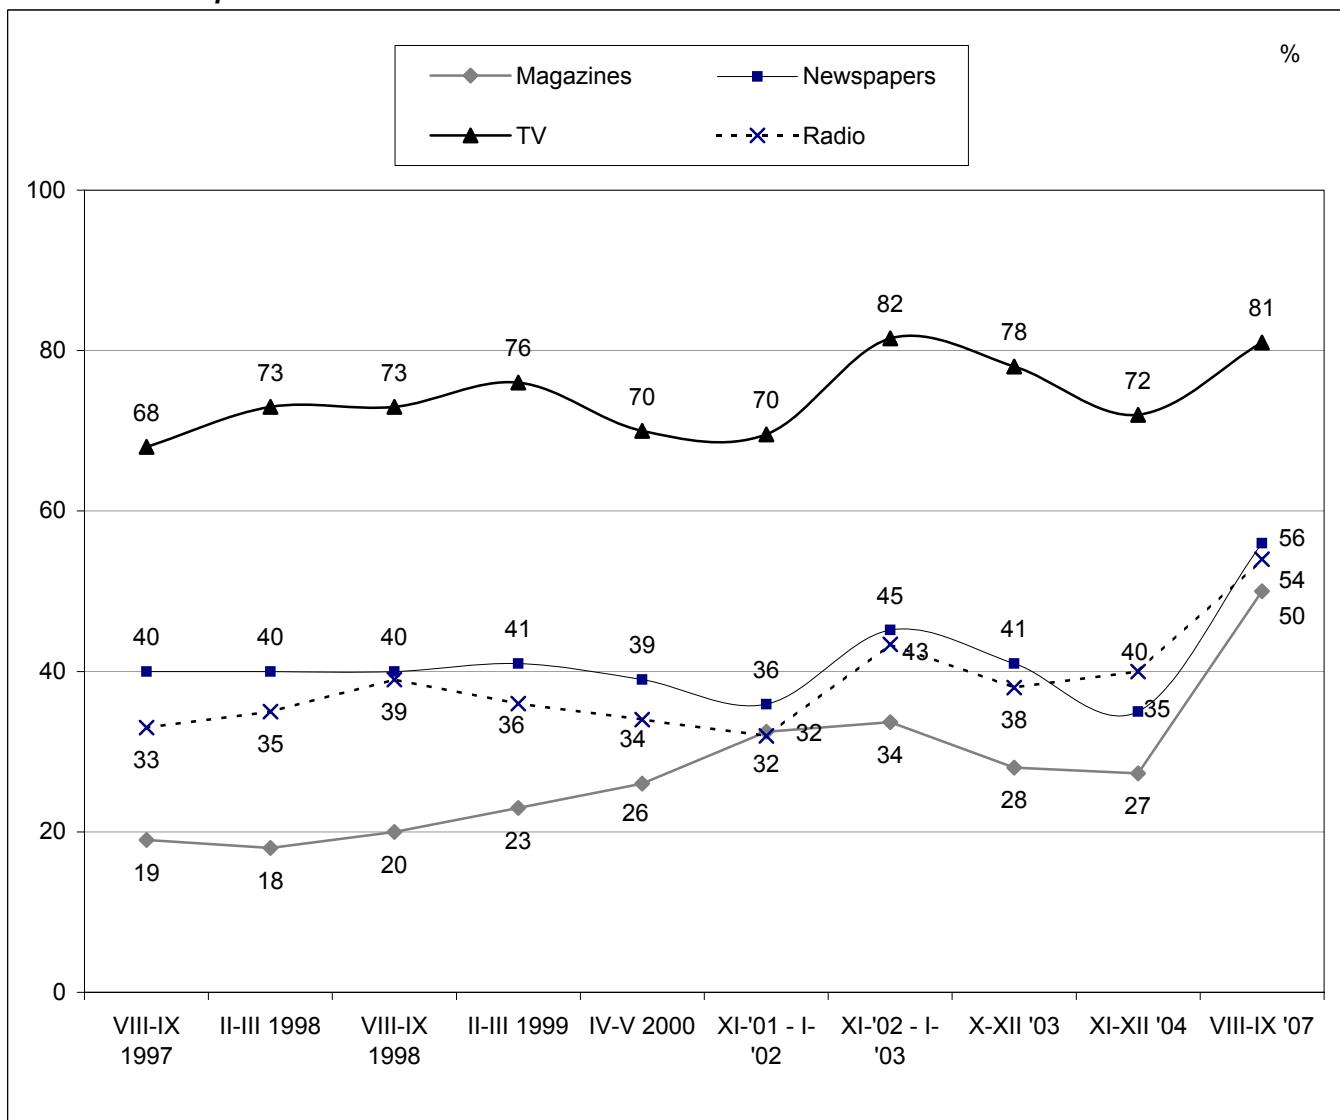

All respondents whose native language is not Latvian, n=627

21. What are the main difficulties?

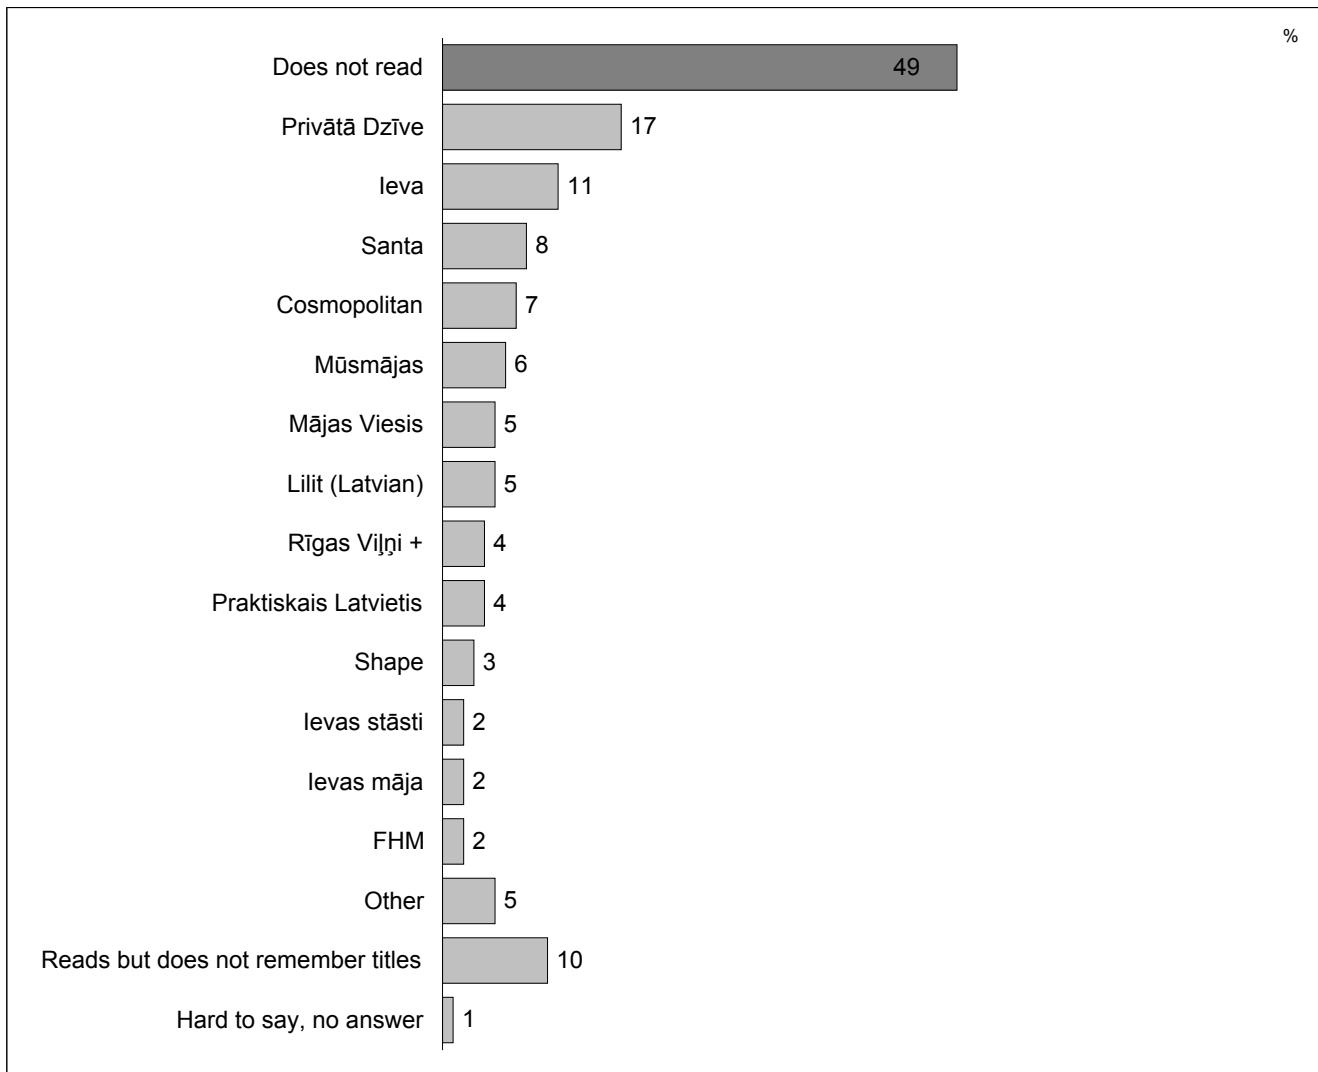

All respondents whose native language is not Latvian and who have had any difficulties; n=208
more than one answer, sum of % >100

PRESS, RADIO, TELEVISION IN LATVIAN

22. The consumption of Latvian mass media

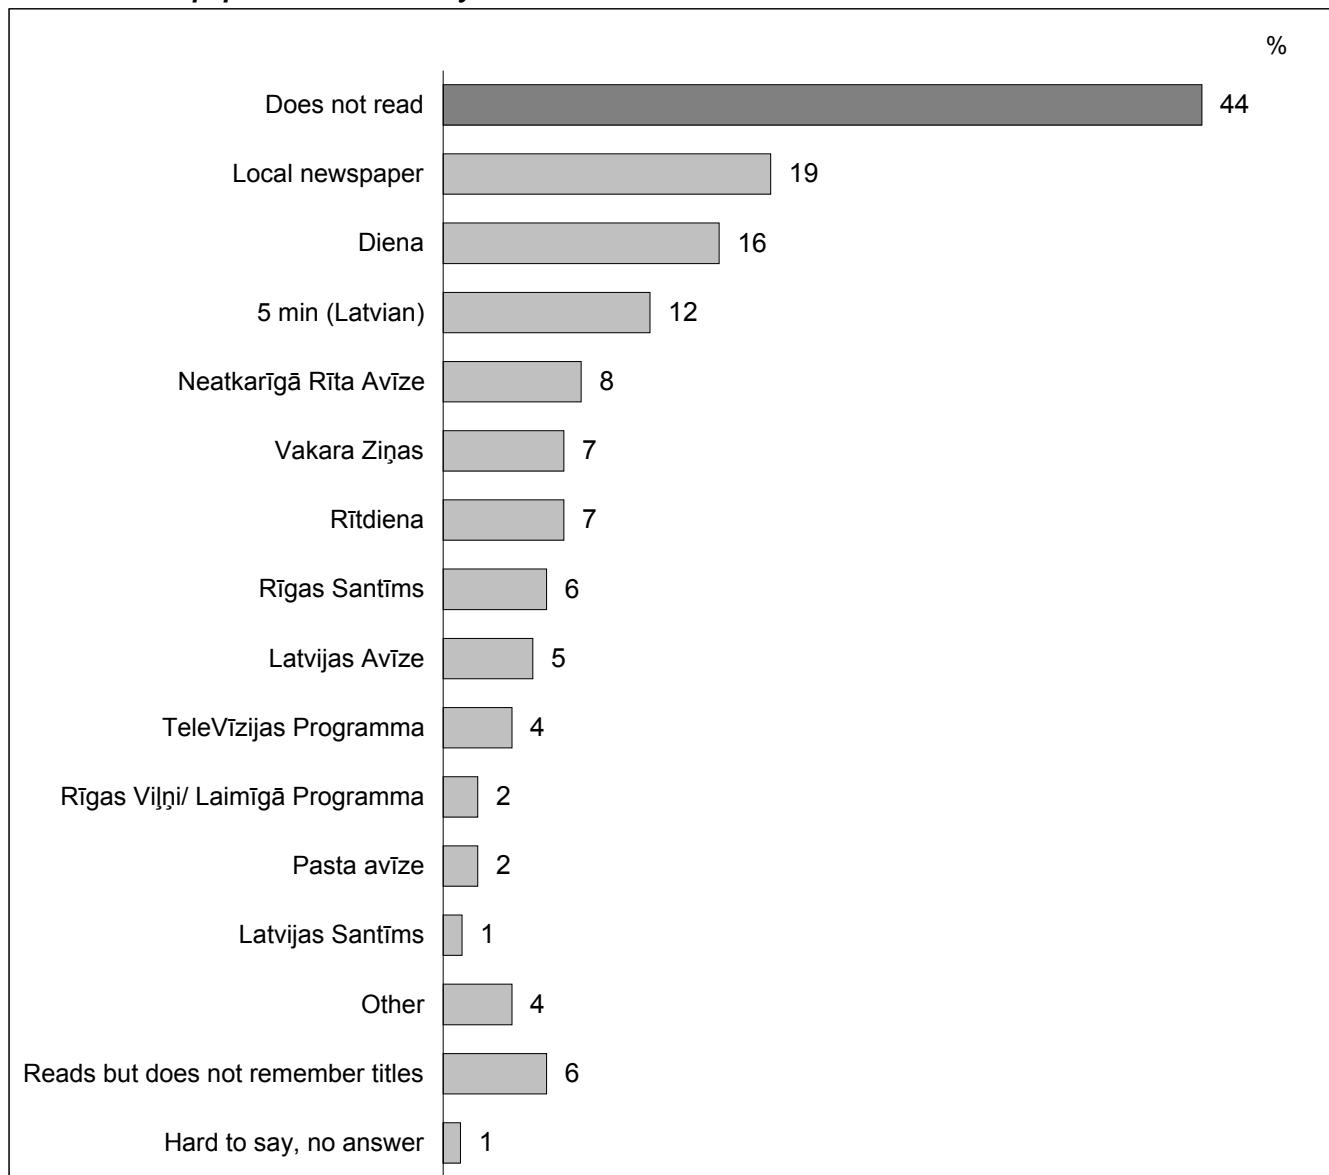

All respondents whose native language is not Latvian, n=627

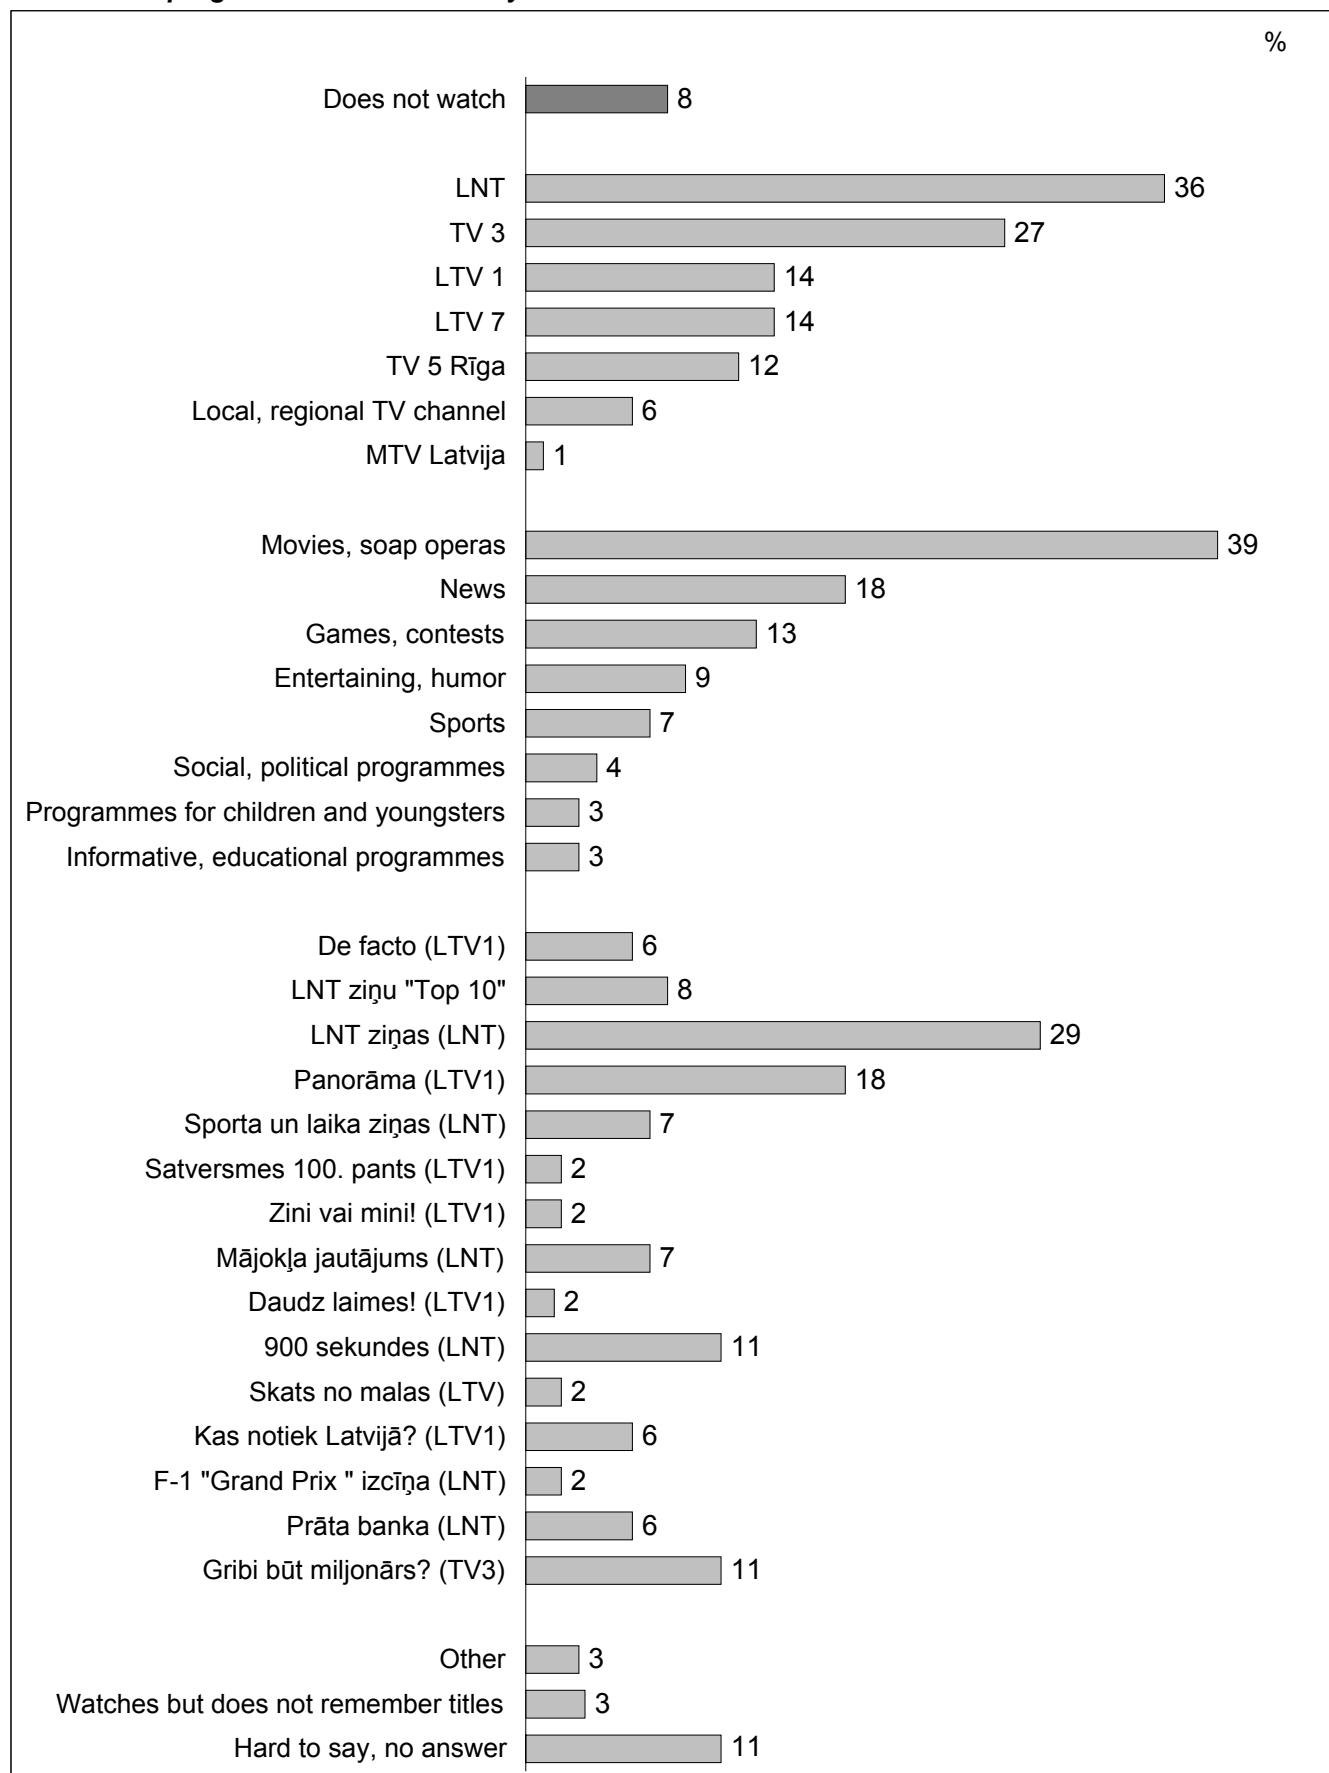

23. What magazines in Latvian do you read?

All respondents whose native language is not Latvian, n=627
more than one answer, sum of % >100

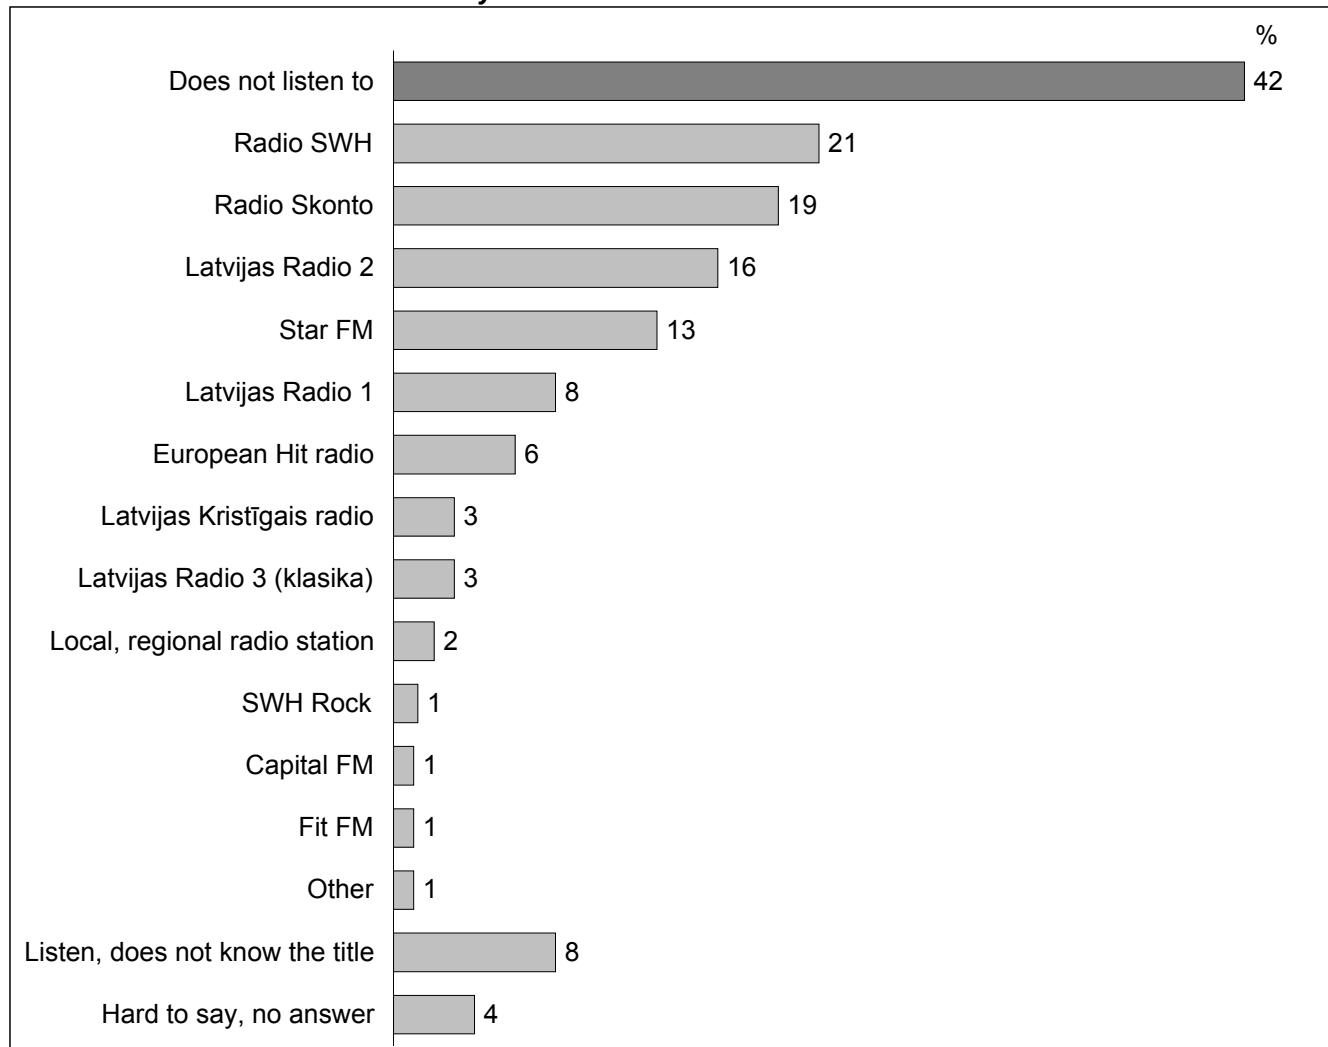

24. What newspapers in Latvian do you read?

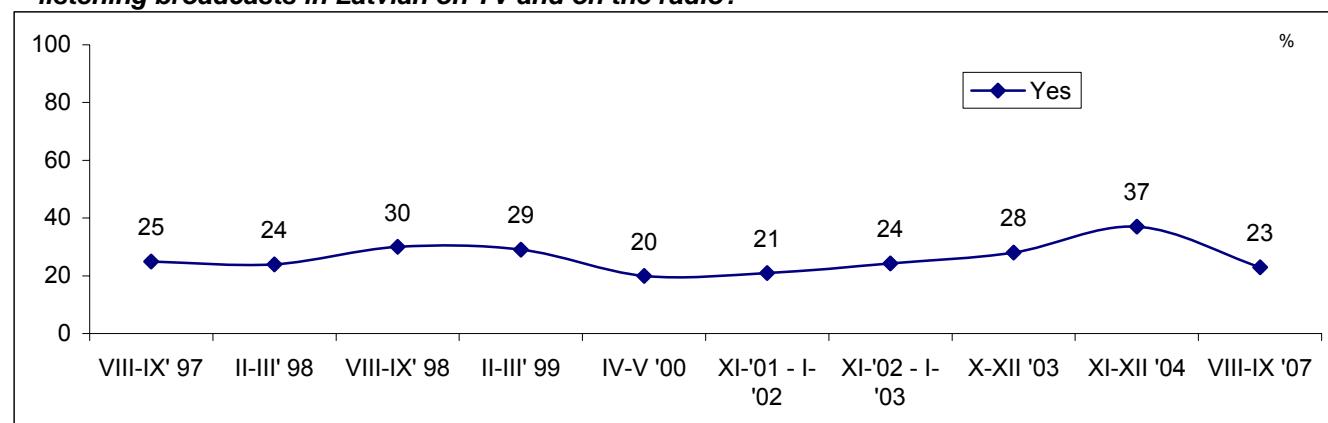

All respondents whose native language is not Latvian, n=627
more than one answer, sum of % >100

25. What TV programmes in Latvian do you watch?

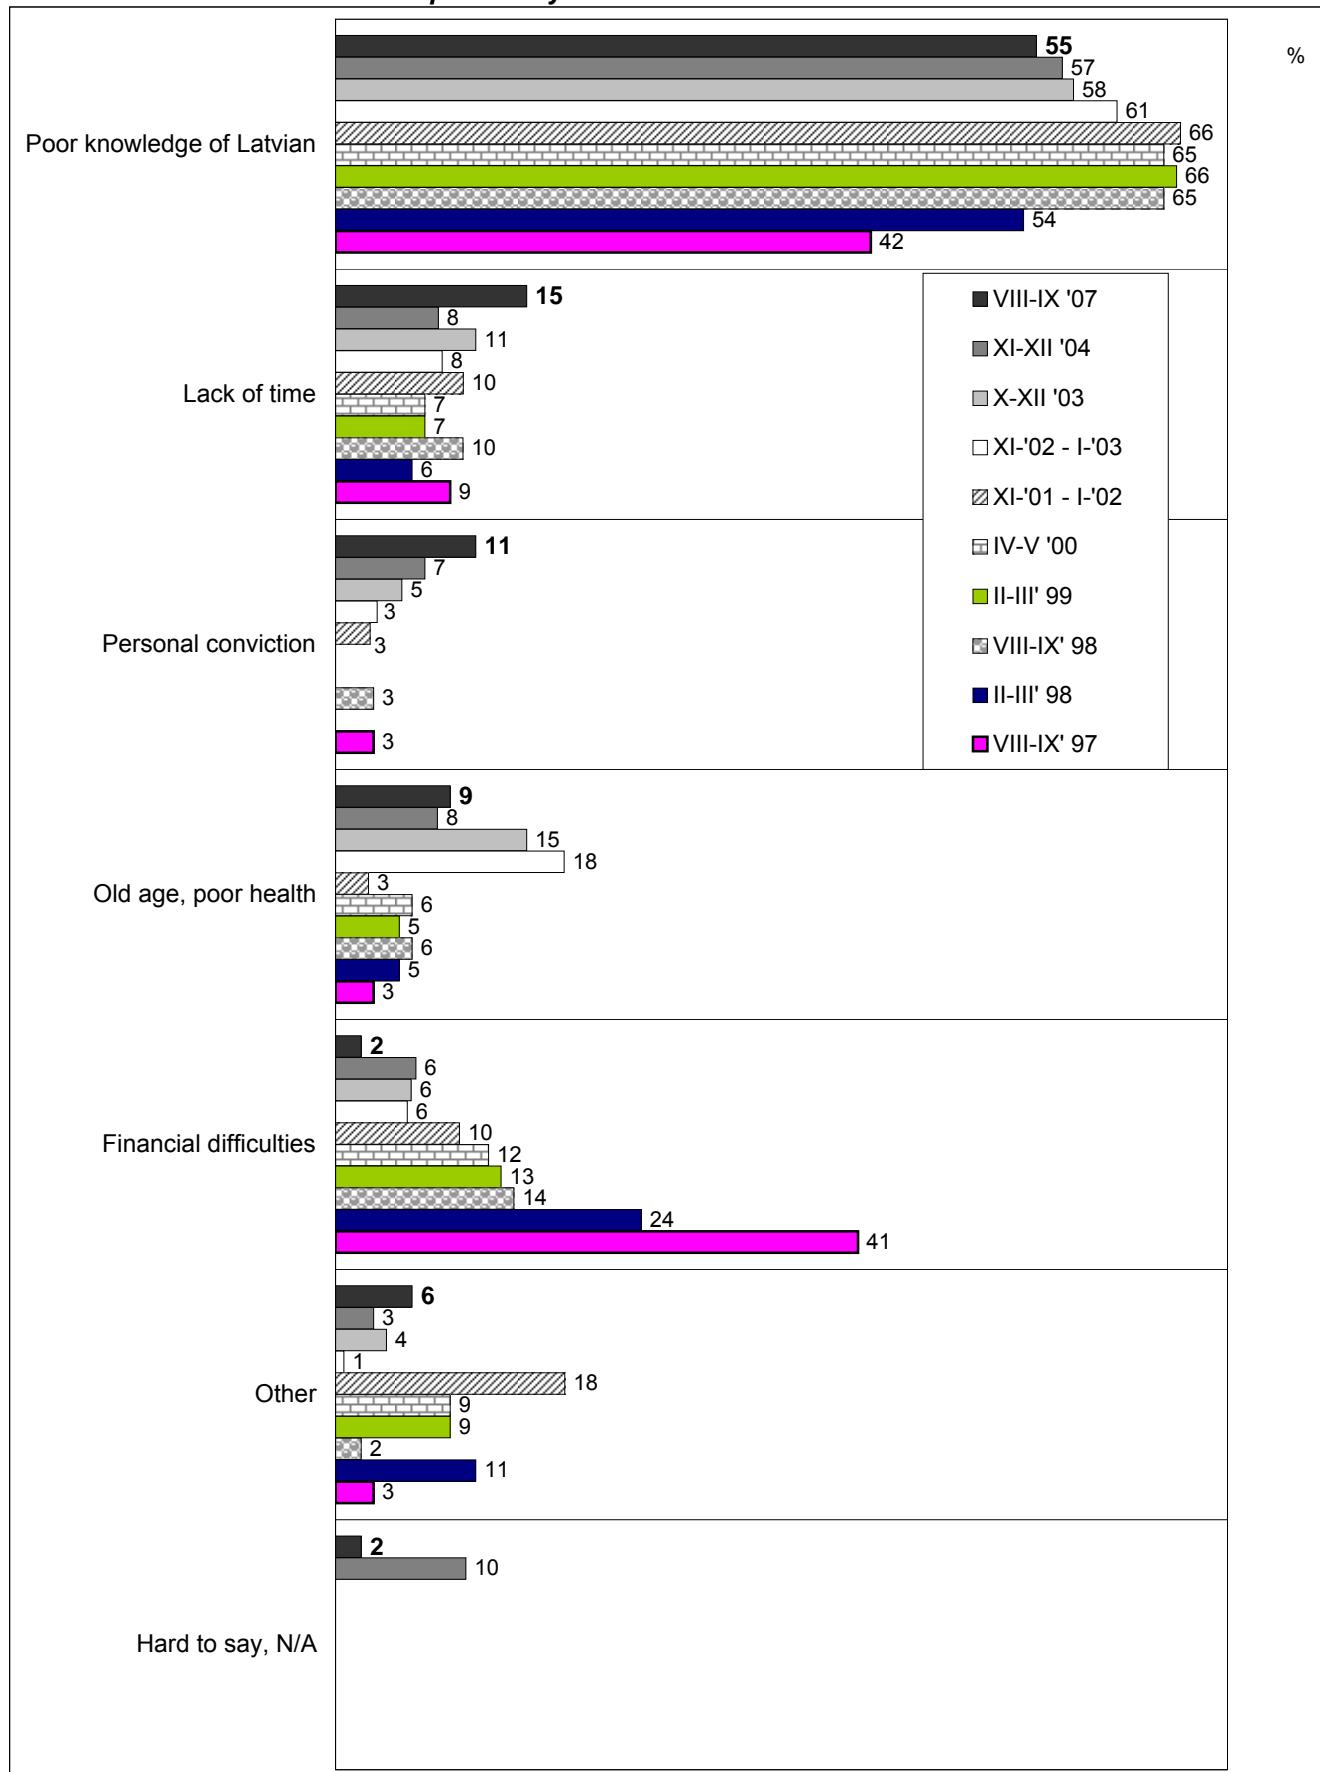

All respondents whose native language is not Latvian, n=627
 more than one answer, sum of % >100

26. What radio stations in Latvian do you listen to?

All respondents whose native language is not Latvian, n=627
more than one answer, sum of % >100

27. Is there anything that prevents you from reading press editions in Latvian or watching and listening broadcasts in Latvian on TV and on the radio?

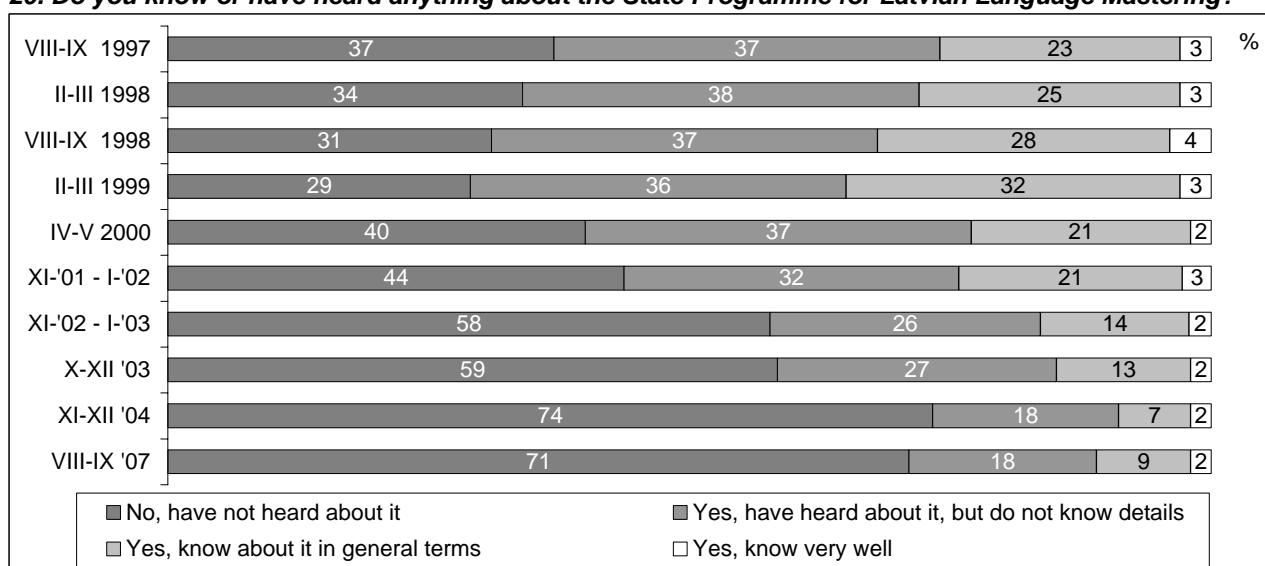

All respondents whose native language is not Latvian, n=627

28. What is the main reason that prevents you from this?

All respondents whom something impedes to read, watch and listen to media in Latvian, n=147

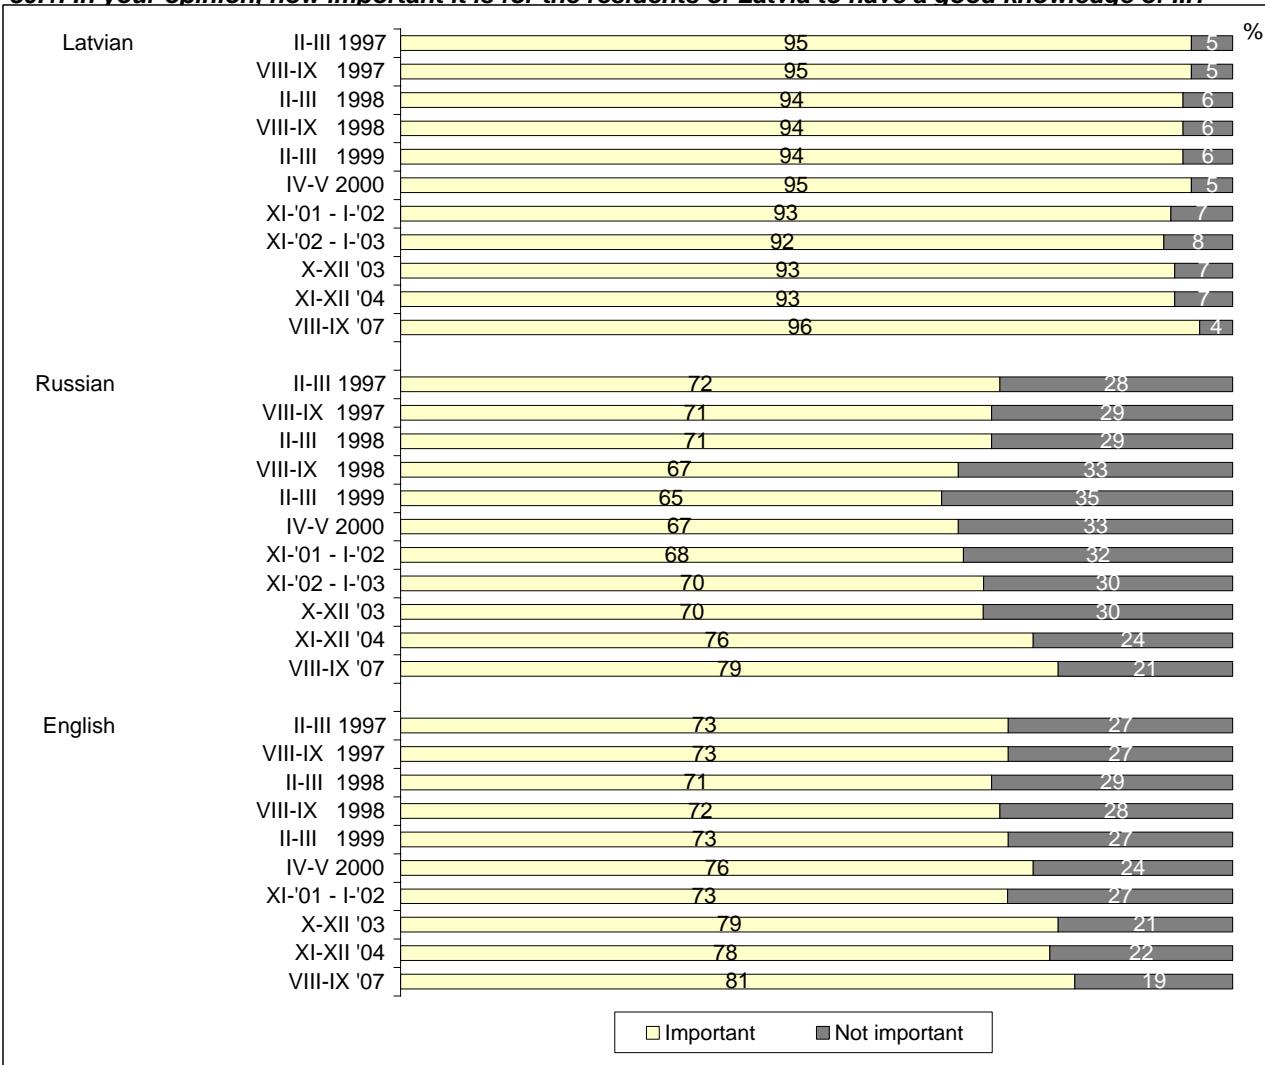

ATTITUDE TOWARDS LANGUAGE KNOWLEDGE

29. Do you know or have heard anything about the State Programme for Latvian Language Mastering?

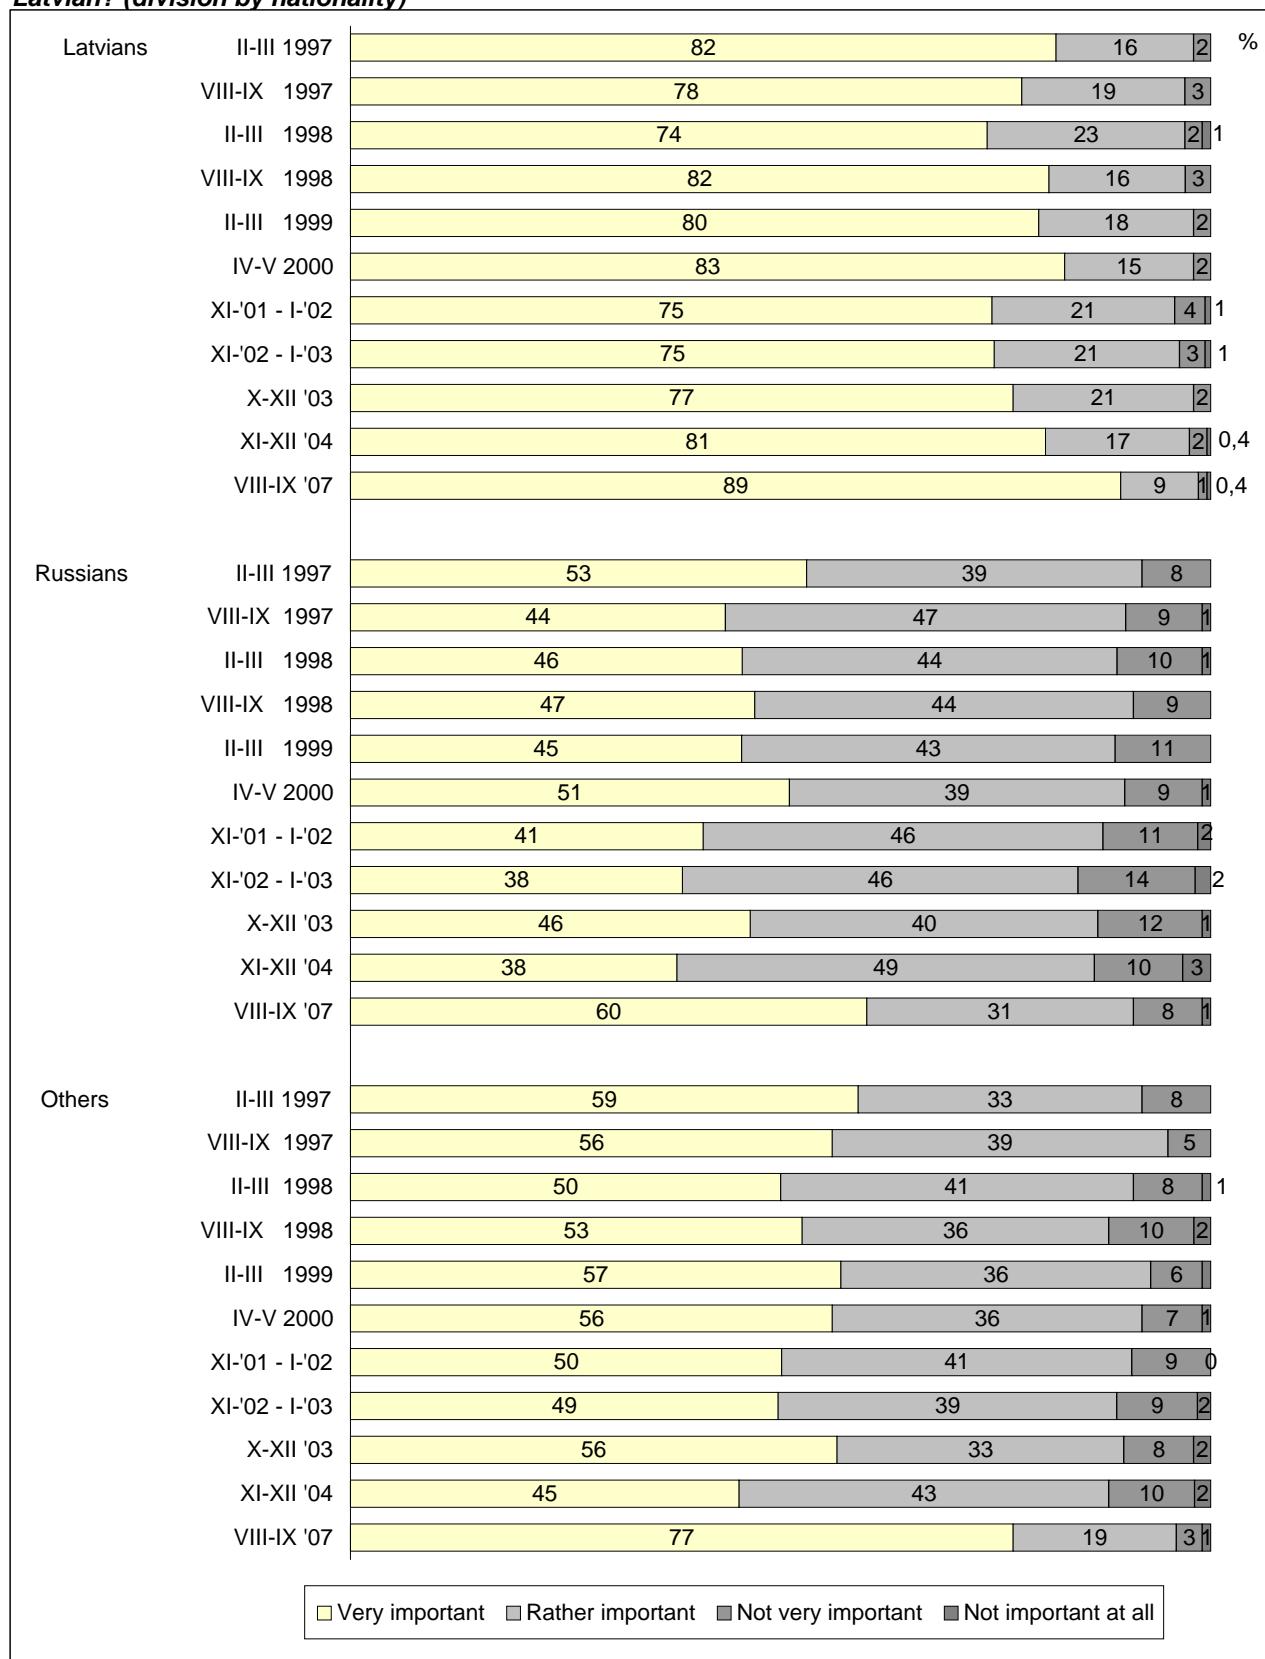

All respondents, n=2000

30.1. In your opinion, how important it is for the residents of Latvia to have a good knowledge of ...?

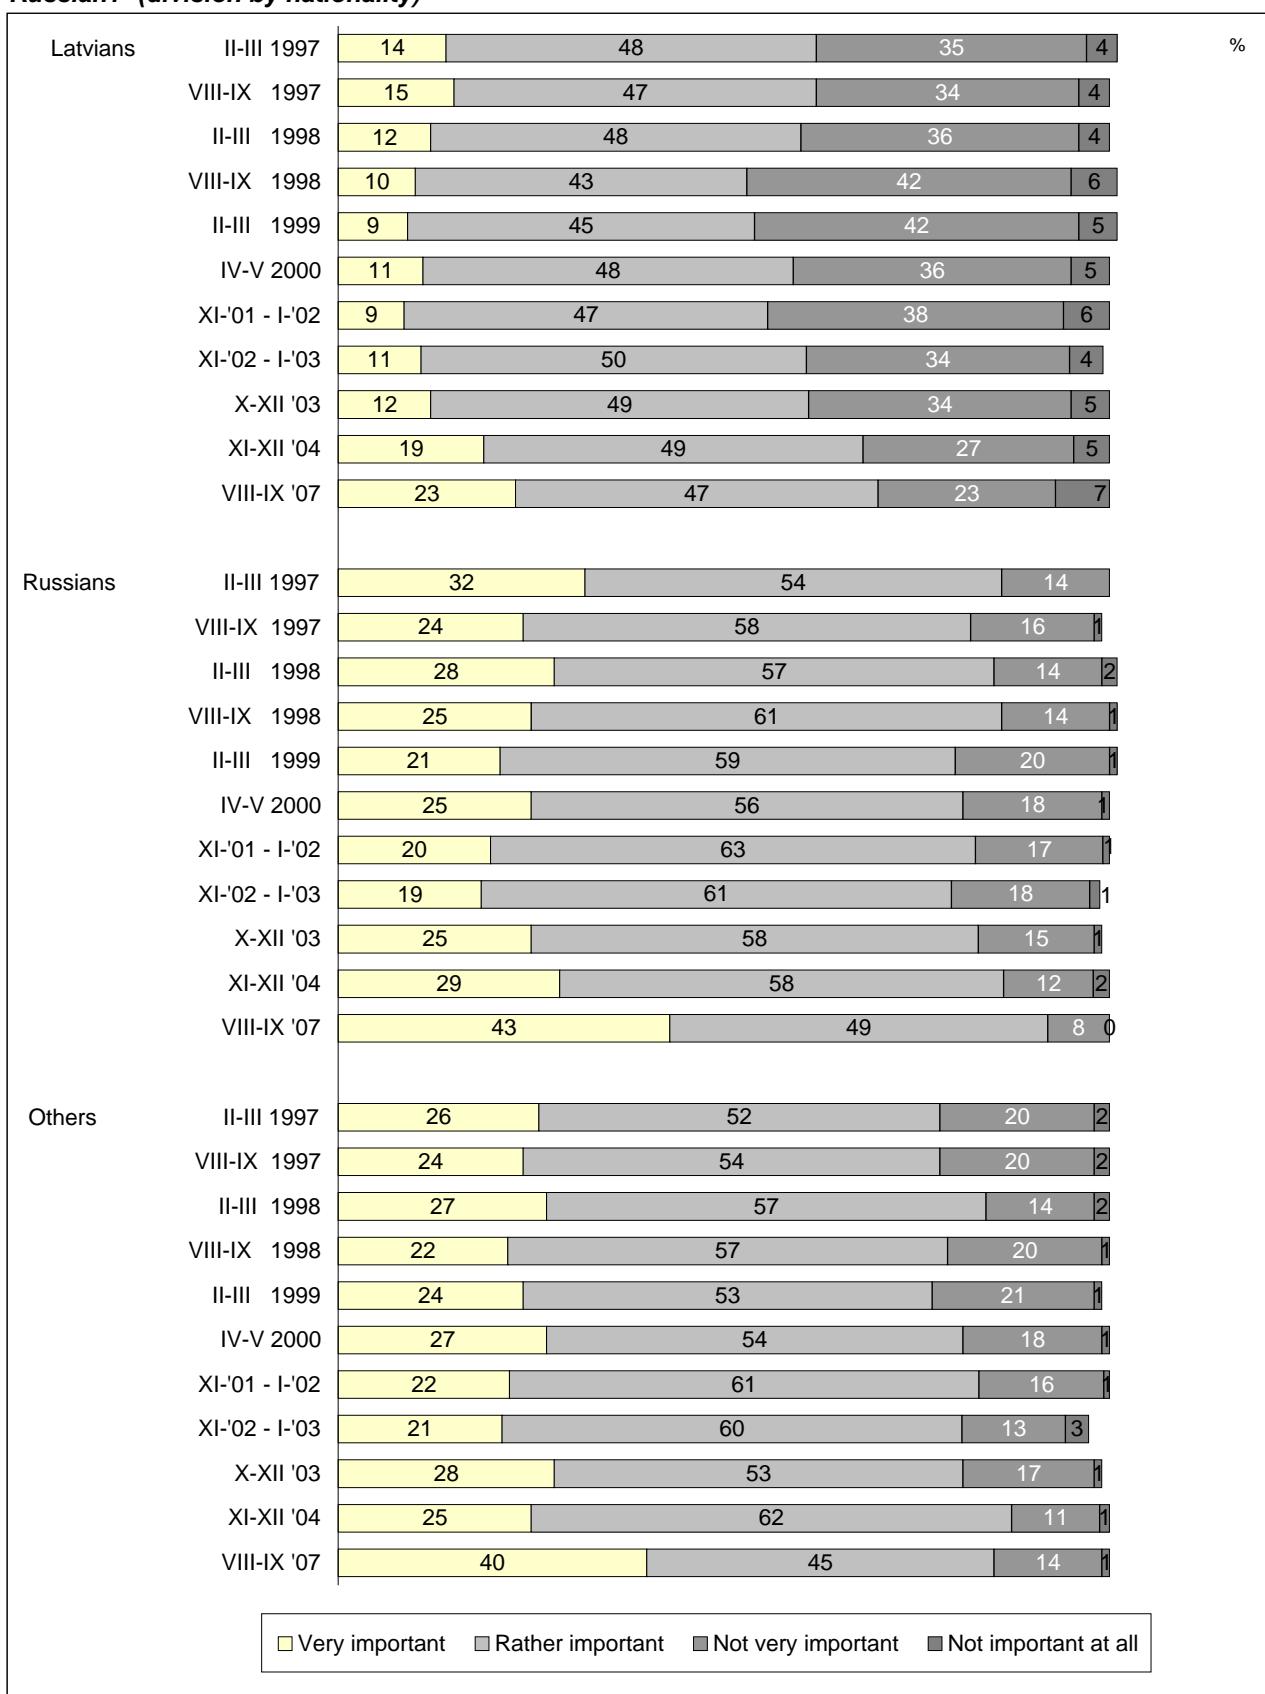

All respondents, n=2000

30.2. In your opinion, how important it is for the residents of Latvia to have a good knowledge of Latvian? (division by nationality)

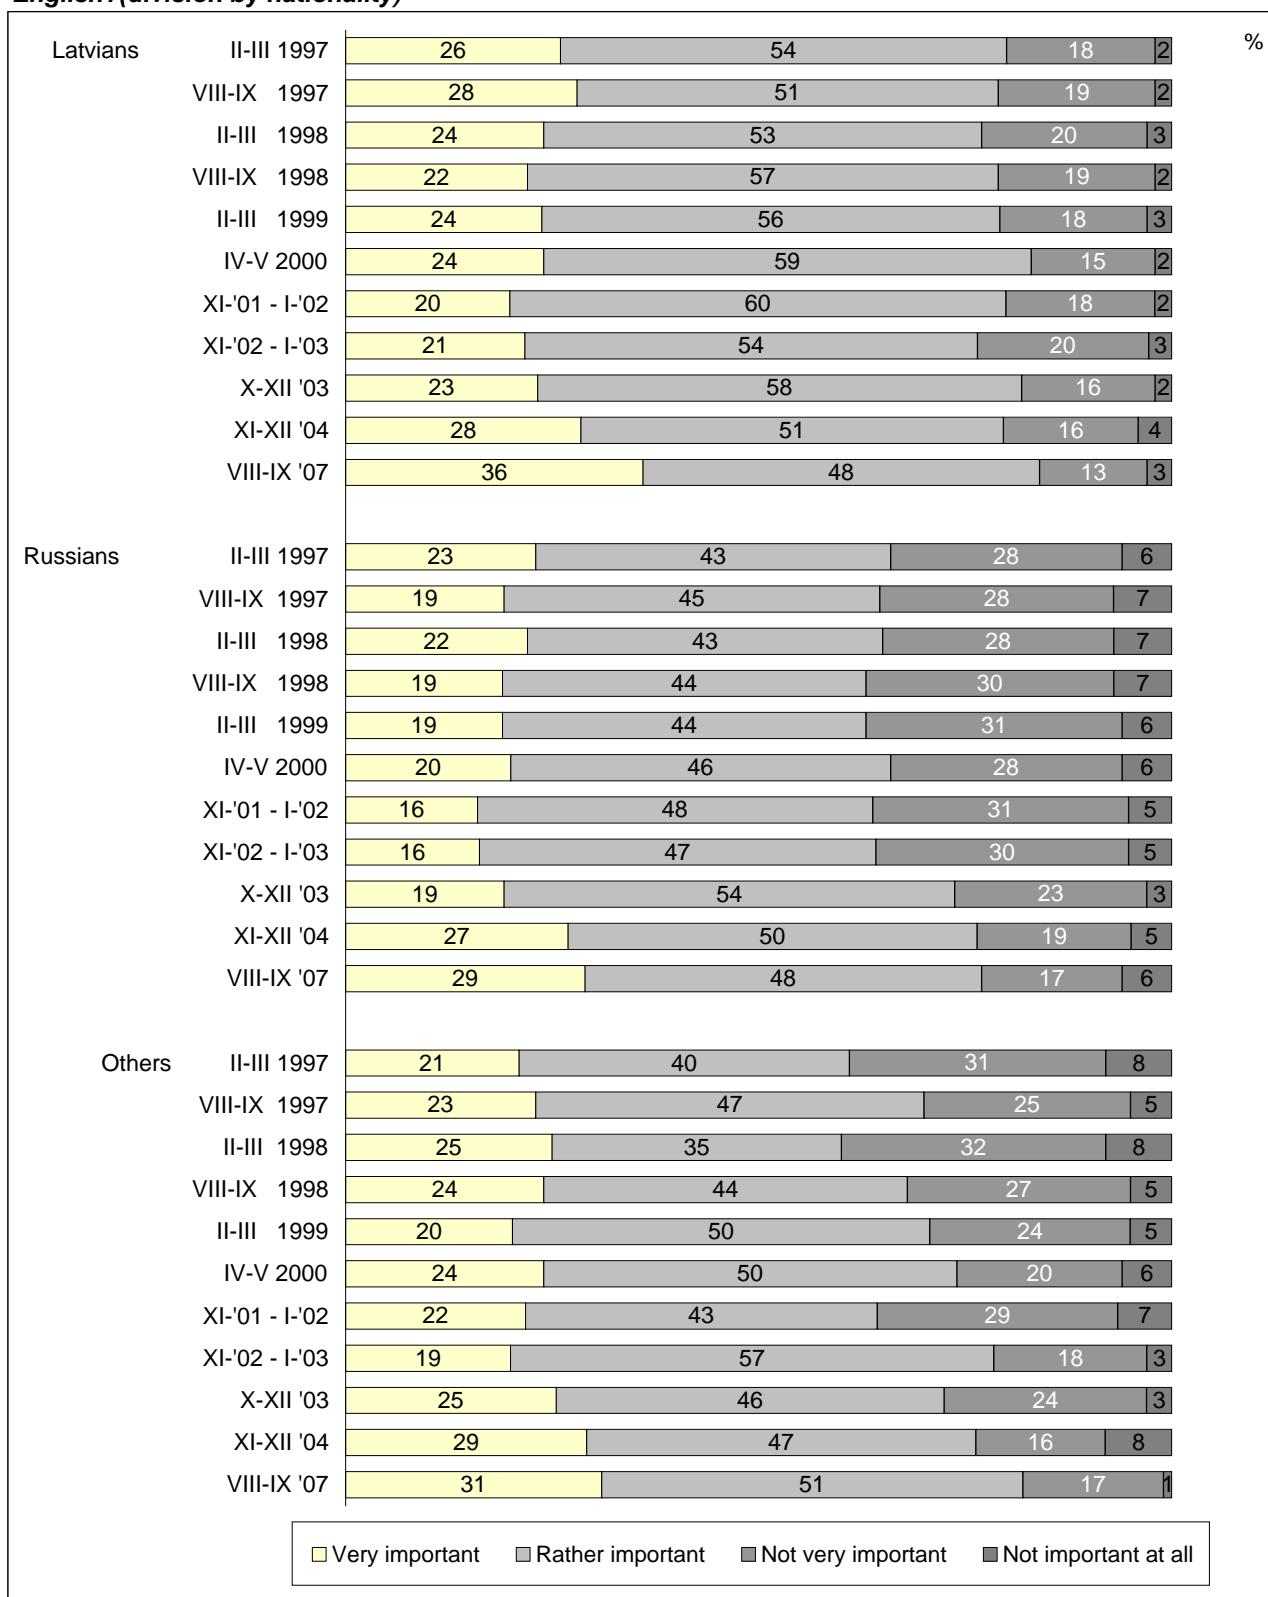

All respondents, n=2000

30.3. In your opinion, how important it is for the residents of Latvia to have a good knowledge of Russian? (division by nationality)

All respondents, n=2000

30.4. In your opinion, how important it is for the residents of Latvia to have a good knowledge of English?(division by nationality)

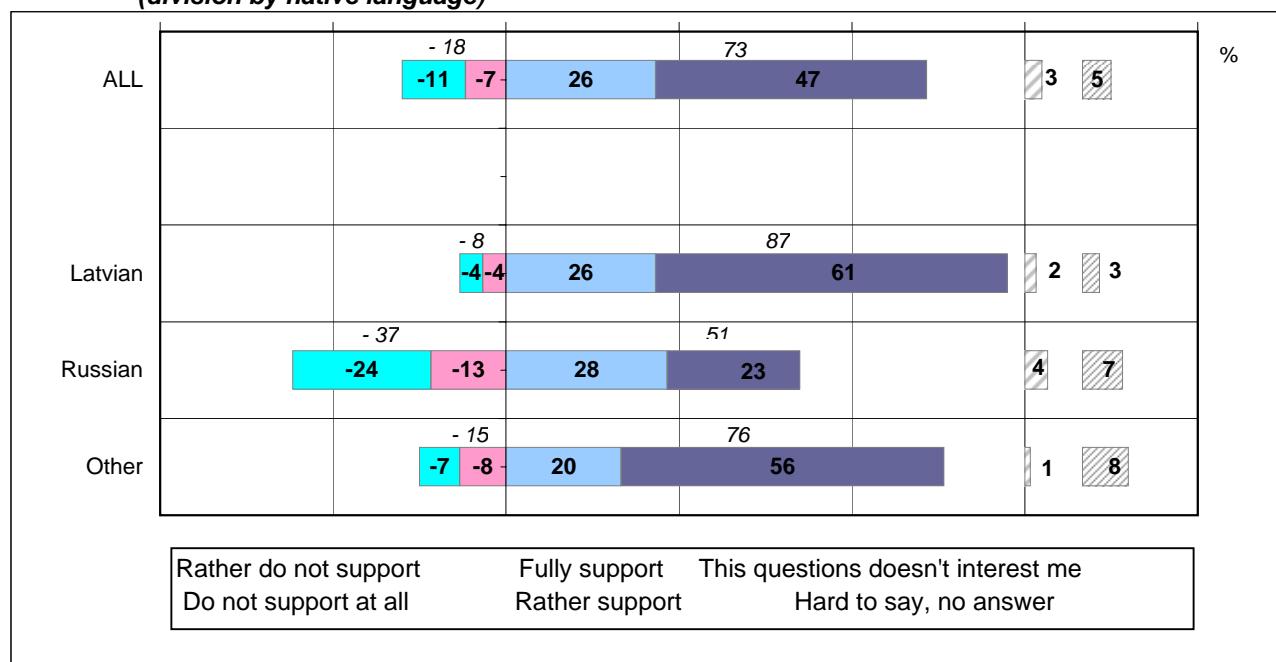

All respondents, n=2000

LATVIAN LANGUAGE IN MINORITY SCHOOLS

31.1. What is your attitude towards the teaching of subjects in Latvian in minority schools?

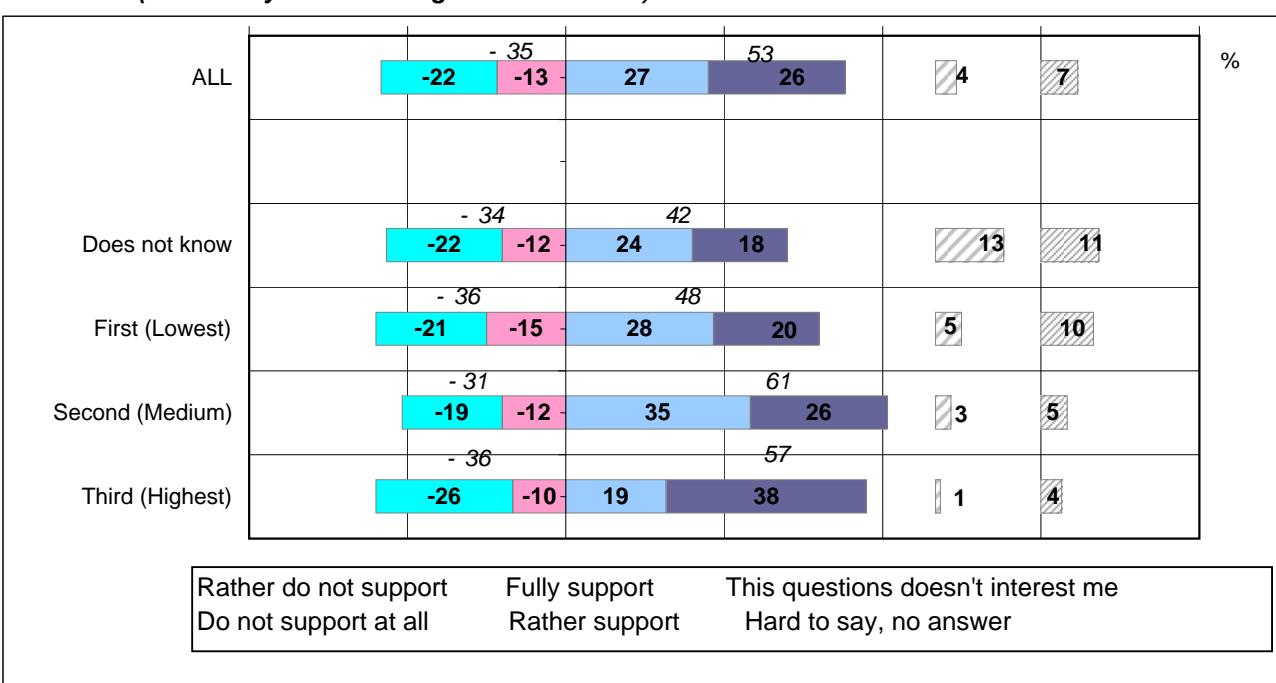

**Do you fully support it, rather support, rather do not support or do not support at all?
(division by native language)**

All respondents; Latvians - n=1370, Russians - n=569, Others - n=61

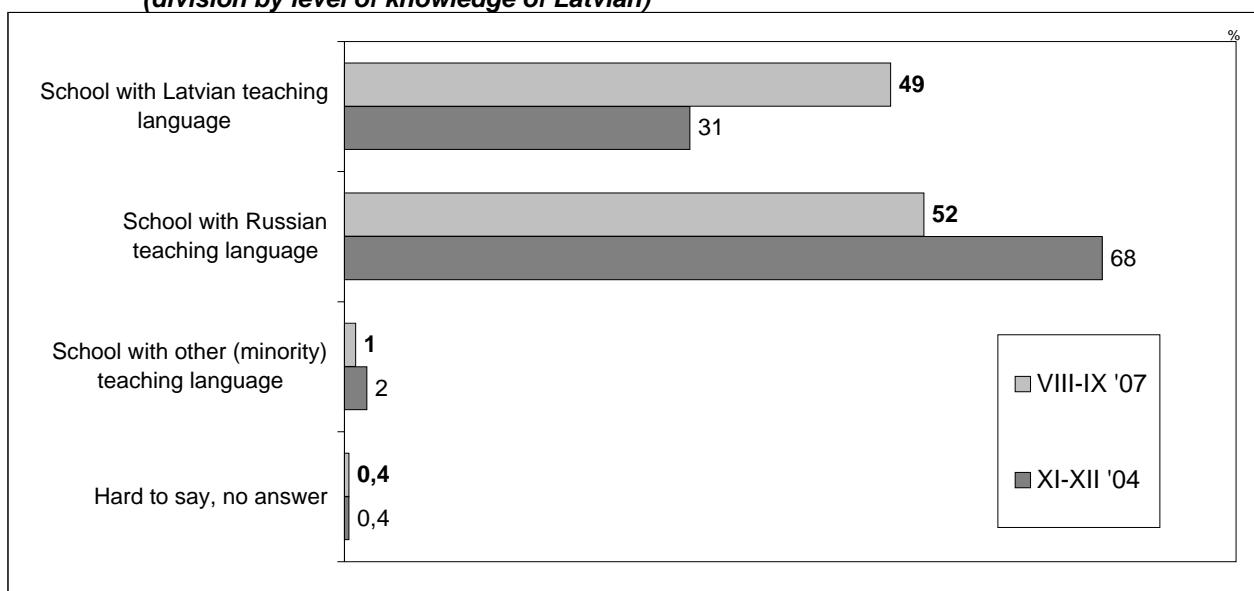

31.2. What is your attitude towards the teaching of subjects in Latvian in minority schools?

**Do you fully support it, rather support, rather do not support or do not support at all?
(division by the knowledge level of latvian)**

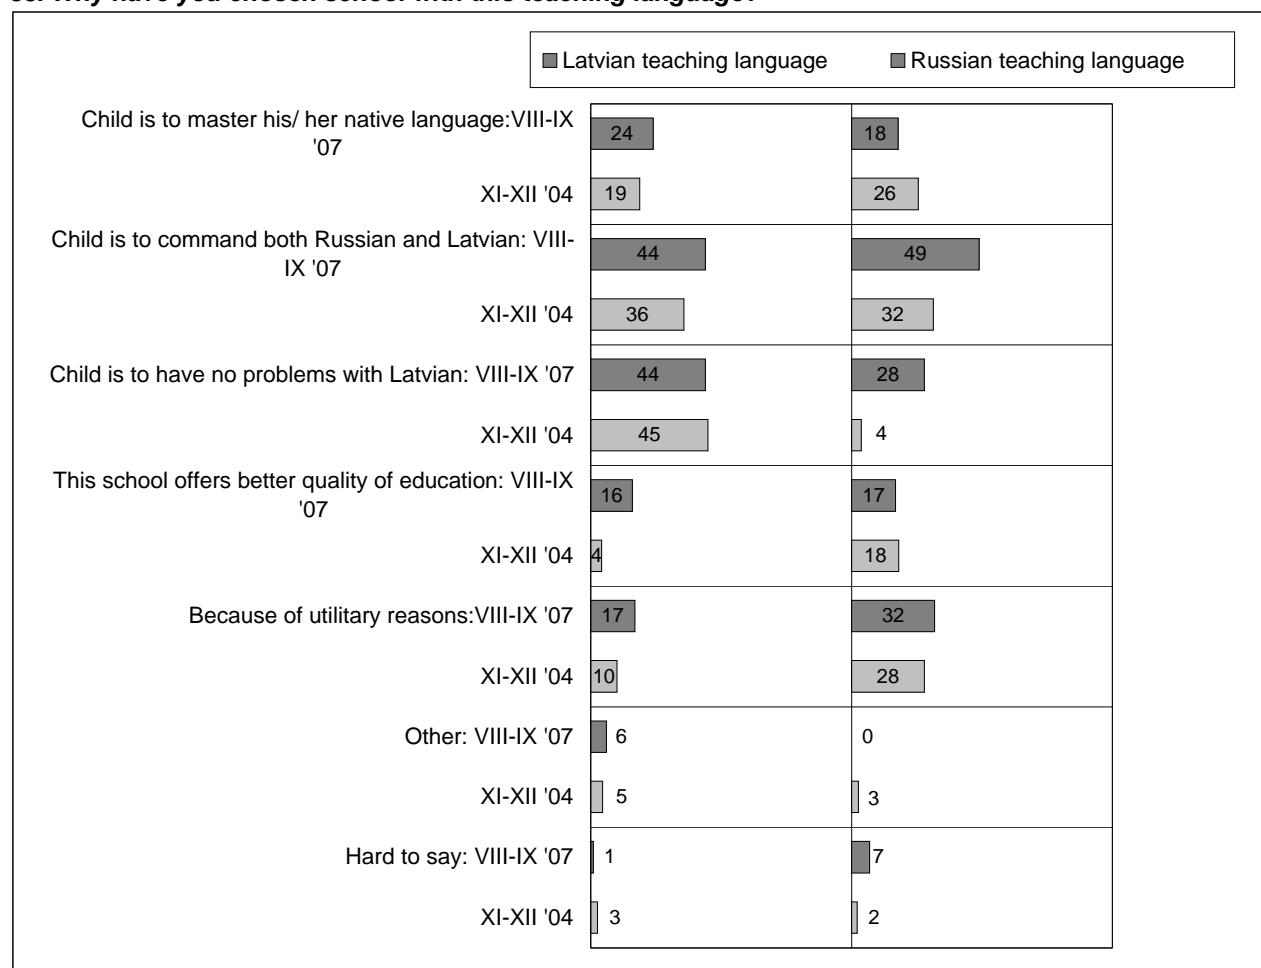

CHOICE OF SCHOOL FOR CHILDREN

32. Does your child go to...
(division by level of knowledge of Latvian)

Respondents whose native language is not Latvian, who have school children in their families; n =151

33. Why have you chosen school with this teaching language?

Respondents whose native language is not Latvian, who have school children in their families; n =151
more than one answer, sum of % >100

RESEARCH DATA

| | |
|--------------------------|--|
| Research/project: | Language, 2007 |
| Conducted by: | BALTIC INSTITUTE OF SOCIAL SCIENCES Elizabetes 65 - 16, Riga LV-1050, Tel. 371-7-217553, Fax. 371-7-217560 |
| Fieldwork dates: | August - September, 2007 |
| Sample: | National representative sample made according to a multi-stage stratified random sampling method |
| Sample size: | 2000 respondents |
| Target group: | Latvia residents aged 15 - 74 |
| Method: | Face-to-face interviews at the respondents' residence |
| Data processing: | SPSS for Windows 13.0 |
| Project managers: | Brigita Zepa |

CONFIDENCE INTERVALS

When interpreting and analyzing the results of the research, one should take into account the statistical error. Insignificant differences are regarded the ones that are within the margins of the confidence interval.

**TABLE OF DEFINING THE CONFIDENCE INTERVAL
(with probability of 95%)**

| % of answers | Number of respondents (sample size) N = | | | | | | | | | | | | | | | |
|--------------|--|------|------|-----|-----|-----|-----|-----|-----|-----|------|------|------|------|------|------|
| | 50 | 75 | 100 | 150 | 200 | 300 | 400 | 500 | 600 | 800 | 1000 | 1200 | 1500 | 1700 | 2000 | 2500 |
| 2 or 98 | 4.0 | 3.2 | 2.8 | 2.3 | 2.0 | 1.6 | 1.4 | 1.3 | 1.1 | 1.0 | 0.9 | 0.8 | 0.7 | 0.7 | 0.6 | 0.6 |
| 4 or 96 | 5.6 | 4.5 | 3.9 | 3.2 | 2.8 | 2.3 | 2.0 | 1.8 | 1.6 | 1.4 | 1.3 | 1.1 | 1.0 | 1.0 | 0.8 | 0.8 |
| 6 or 94 | 6.8 | 5.5 | 4.8 | 3.9 | 3.4 | 2.8 | 2.4 | 2.1 | 2.0 | 1.7 | 1.5 | 1.4 | 1.2 | 1.2 | 1.1 | 1.0 |
| 8 or 92 | 7.7 | 6.2 | 5.4 | 4.4 | 3.8 | 3.1 | 2.7 | 2.4 | 2.2 | 1.9 | 1.7 | 1.6 | 1.4 | 1.3 | 1.2 | 1.1 |
| 10 or 90 | 8.5 | 6.9 | 6.0 | 4.9 | 4.3 | 3.5 | 3.0 | 2.7 | 2.5 | 2.1 | 1.9 | 1.7 | 1.5 | 1.5 | 1.3 | 1.2 |
| 12 or 88 | 9.2 | 7.5 | 6.5 | 5.3 | 4.6 | 3.8 | 3.3 | 2.9 | 2.7 | 2.3 | 2.1 | 1.9 | 1.7 | 1.6 | 1.4 | 1.3 |
| 15 or 85 | 10.1 | 8.2 | 7.1 | 5.9 | 5.1 | 4.1 | 3.6 | 3.2 | 2.9 | 2.5 | 2.3 | 2.1 | 1.8 | 1.8 | 1.6 | 1.4 |
| 20 or 80 | 11.4 | 9.2 | 8.0 | 6.6 | 5.7 | 4.6 | 4.0 | 3.6 | 3.3 | 2.8 | 2.5 | 2.3 | 2.1 | 1.9 | 1.8 | 1.6 |
| 25 or 75 | 12.3 | 10.0 | 8.7 | 7.1 | 6.1 | 5.0 | 4.3 | 3.9 | 3.6 | 3.0 | 2.8 | 2.5 | 2.2 | 2.1 | 1.9 | 1.7 |
| 30 or 70 | 13.0 | 10.5 | 9.2 | 7.5 | 6.5 | 5.3 | 4.6 | 4.1 | 3.8 | 3.2 | 2.9 | 2.6 | 2.4 | 2.2 | 2.1 | 1.8 |
| 35 or 65 | 13.5 | 11.0 | 9.5 | 7.8 | 6.8 | 5.5 | 4.8 | 4.3 | 3.9 | 3.3 | 3.1 | 2.8 | 2.5 | 2.3 | 2.1 | 1.9 |
| 40 or 60 | 13.9 | 11.3 | 9.8 | 8.0 | 7.0 | 5.7 | 4.9 | 4.4 | 4.0 | 3.4 | 3.1 | 2.8 | 2.5 | 2.4 | 2.2 | 2.0 |
| 45 or 55 | 14.1 | 11.4 | 9.9 | 8.1 | 7.0 | 5.8 | 5.0 | 4.5 | 4.1 | 3.5 | 3.2 | 2.9 | 2.6 | 2.4 | 2.2 | 2.0 |
| 50 or 50 | 14.2 | 11.5 | 10.0 | 8.2 | 7.1 | 5.8 | 5.0 | 4.5 | 4.1 | 3.5 | 3.2 | 2.9 | 2.6 | 2.4 | 2.2 | 2.0 |

To define the confidence interval, it is necessary to know the unweighted size of the respective sub-group (in tables it is denoted with "N") and the result in per cent. Using these values, in the respective cell of the table you can find the margins of the confidence interval for random sample +/- in per cent with a probability of 95%.

1. Native language
